

# Contents

<i>Preface</i>	vii
<i>List of Symbols</i>	xiii

## I. PRELIMINARIES

1. Schwarz's Lemma	1
2. Pick's Theorem	5
3. Poisson Integrals	10
4. Hardy–Littlewood Maximal Function	19
5. Nontangential Maximal Function and Fatou's Theorem	27
6. Subharmonic Functions	32
Notes	38
Exercises and Further Results	39

## II. $H^p$ SPACES

1. Definitions	48
2. Blaschke Products	51
3. Maximal Functions and Boundary Values	55
4. $(1/\pi) \int (\log  f(t) /(1+t^2))dt > -\infty$	61
5. The Nevanlinna Class	66
6. Inner Functions	71
7. Beurling's Theorem	78
Notes	83
Exercises and Further Results	84

## III. CONJUGATE FUNCTIONS

1. Preliminaries	98
2. The $L^p$ Theorems	106
3. Conjugate Functions and Maximal Functions	111

Notes	118
Exercises and Further Results	120
<b>IV. SOME EXTREMAL PROBLEMS</b>	
1. Dual Extremal Problems	128
2. The Carleson–Jacobs Theorem	134
3. The Helson–Szegő Theorem	139
4. Interpolating Functions of Constant Modulus	145
5. Parametrization of $K$	151
6. Nevanlinna's Proof	159
Notes	168
Exercises and Further Results	168
<b>V. SOME UNIFORM ALGEBRA</b>	
1. Maximal Ideal Spaces	176
2. Inner Functions	186
3. Analytic Discs in Fibers	191
4. Representing Measures and Orthogonal Measures	193
5. The Space $L^1/H_0^1$	198
Notes	205
Exercises and Further Results	206
<b>VI. BOUNDED MEAN OSCILLATION</b>	
1. Preliminaries	215
2. The John–Nirenberg Theorem	223
3. Littlewood–Paley Integrals and Carleson Measures	228
4. Fefferman's Duality Theorem	234
5. Vanishing Mean Oscillation	242
6. Weighted Norm Inequalities	245
Notes	259
Exercises and Further Results	261
<b>VII. INTERPOLATING SEQUENCES</b>	
1. Carleson's Interpolation Theorem	275
2. The Linear Operator of Interpolation	285
3. Generations	289
4. Harmonic Interpolation	292
5. Earl's Elementary Proof	299
Notes	304
Exercises and Further Results	305

**VIII. THE CORONA CONSTRUCTION**

1. Inhomogeneous Cauchy–Riemann Equations	309
2. The Corona Theorem	314
3. Two Theorems on Minimum Modulus	323
4. Interpolating Blaschke Products	327
5. Carleson’s Construction	333
6. Gradients of Bounded Harmonic Functions	338
7. A Constructive Solution of $\partial b/\partial \bar{z} = \mu$	349
Notes	357
Exercises and Further Results	358

**IX. DOUGLAS ALGEBRAS**

1. The Douglas Problem	364
2. $H^\infty + C$	367
3. The Chang–Marshall Theorem	369
4. The Structure of Douglas Algebras	375
5. The Local Fatou Theorem and an Application	379
Notes	384
Exercises and Further Results	385

**X. INTERPOLATING SEQUENCES AND MAXIMAL IDEALS**

1. Analytic Discs in $\mathfrak{M}$	391
2. Hoffman’s Theorem	401
3. Approximate Dependence between Kernels	406
4. Interpolating Sequences and Harmonic Separation	412
5. A Constructive Douglas–Rudin Theorem	418
Notes	428
Exercises and Further Results	428

<b>BIBLIOGRAPHY</b>	434
