<b>Preface</b>	<b>i</b>
<b>1 Introduction</b>	<b>1</b>
1.1 A brief history . . . . .	1
1.2 Two approaches to the singular $\mathcal{H}_\infty$ problem . . . . .	3
1.3 Organization of this book . . . . .	4
1.4 Notation . . . . .	7
<b>2 The <math>L_2</math>-gain, and the nonlinear <math>\mathcal{H}_\infty</math> control problem</b>	<b>9</b>
2.1 The $L_2$ -gain of a nonlinear system . . . . .	10
2.2 The $\mathcal{H}_\infty$ control problem for a nonlinear system . . . . .	19
2.2.1 The regular state feedback $\mathcal{H}_\infty$ problem for nonlinear systems . . . . .	21
2.2.2 The regular measurement feedback $\mathcal{H}_\infty$ problem for nonlinear systems . . . . .	27
<b>3 The singular <math>\mathcal{H}_\infty</math> problem: a cheap control approach</b>	<b>29</b>
3.1 Linear disturbance attenuation . . . . .	30
3.2 Singular nonlinear state feedback $\mathcal{H}_\infty$ control . . . . .	32
3.2.1 Singular $\mathcal{H}_\infty$ control . . . . .	34
3.2.2 Regularized $\mathcal{H}_\infty$ control . . . . .	44
3.2.3 The nonlinear system versus its linearization . . . . .	48
3.3 Singular nonlinear measurement feedback $\mathcal{H}_\infty$ control . . . . .	53
<b>4 The <math>\mathcal{H}_\infty</math> almost disturbance decoupling problem</b>	<b>61</b>
4.1 Almost disturbance decoupling for affine nonlinear systems . . . . .	61

<b>5</b>	<b>The singular <math>\mathcal{H}_\infty</math> problem: a geometric approach</b>	<b>79</b>
5.1	Singular linear $\mathcal{H}_\infty$ control by state feedback . . . . .	80
5.1.1	State transformation for linear systems with $K = 0$ . . . . .	81
	Conditioned invariance . . . . .	81
	State transformation . . . . .	82
5.1.2	State transformation for linear system with $K \neq 0$ . . . . .	83
5.1.3	The quadratic matrix inequality . . . . .	86
5.1.4	The state feedback $\mathcal{H}_\infty$ control problem . . . . .	87
5.1.5	Factorization approach . . . . .	89
5.2	Singular $\mathcal{H}_\infty$ problem for general nonlinear systems . . . . .	91
5.2.1	State transformation for affine nonlinear systems without direct feedthrough from inputs to outputs . . . . .	92
	Conditioned invariance . . . . .	92
	State transformation . . . . .	93
5.2.2	State transformation for general nonlinear systems . . . . .	97
5.2.3	Special cases . . . . .	103
	Regular $\mathcal{H}_\infty$ problem . . . . .	103
	Full singular $\mathcal{H}_\infty$ problem . . . . .	104
5.2.4	The nonlinear state feedback $\mathcal{H}_\infty$ problem: sufficient conditions . . . . .	105
5.2.5	The regular $\mathcal{H}_\infty$ subproblem . . . . .	115
5.2.6	The $\mathcal{H}_\infty$ almost disturbance decoupling problem . . . . .	120
5.2.7	Factorization approach . . . . .	124
<b>6</b>	<b>Examples</b>	<b>133</b>
6.1	Tracking of the orientation of a rigid body . . . . .	133
6.1.1	Cheap control approach . . . . .	136
6.1.2	Geometric approach . . . . .	142
6.2	Inverted pendulum on a cart . . . . .	150
6.2.1	Cheap control approach . . . . .	152
6.2.2	Geometric approach . . . . .	154
6.2.3	Comparison of the two controllers . . . . .	159
<b>7</b>	<b>Robust stabilization under gain-bounded uncertainties</b>	<b>165</b>
7.1	Parameter uncertainty . . . . .	165
7.2	Multiplicative perturbations . . . . .	173

---

<b>8</b>	<b>Conclusions</b>	<b>177</b>
8.1	Summary . . . . .	177
8.2	Open problems . . . . .	180
<b>A</b>	<b>Notions from differential geometry</b>	<b>181</b>
	<b>Bibliography</b>	<b>187</b>
	<b>Index</b>	<b>195</b>
