|---|------|
| 0. INTRODUCTION | v |
| 1. PHASE PLANE STUDIES OF A CYCLIC SYSTEM | 1 |
| Symmetries in the phase plane and their involutions | |
| Three typical time-continuous studies | |
| Special C^1 and PL models and numerical experiments | |
| Existence of hetero- and homoclinic points | |
| Homoclinic bifurcation and phase transitions | |
| 2. CONTINUA OF SPECIAL PERIODIC SOLUTIONS | 81 |
| Reduction to a cyclic system of ODE's and a fixed point problem | |
| Linear theory | |
| Nodal theory | |
| A priori estimates for special periodic solutions | |
| Bifurcation from infinity | |
| Other nonlinearities | |
| 3. NUMERICAL APPROXIMATION AND SPURIOUS SOLUTIONS | 96 |
| Derivation of the approximation scheme | |
| Existence of spurious solutions | |
| Experiments | |
| 4. A PRIORI BOUNDS WITHOUT THE ASSUMPTION OF ODDNESS | 106 |
| A priori estimates for slowly oscillating periodic solutions | |
| Existence of slowly oscillating periodic solutions | |
