# TABLE OF CONTENTS

## 0 INTRODUCTION

### I THE KEPLER PROBLEM

(I.1) Formulation  
(I.2) Collision manifold  
(I.3) Infinity manifolds  
(I.4) Summary on the singularities  
(I.5) Heteroclinic orbits  
(I.6) Global flow  
(I.7) Poincaré map

## II THE ANISOTROPIC KEPLER PROBLEM

(II.1) Formulation  
(II.2) Symmetries  
(II.3) The Collision manifold  
(II.4) The Infinity manifolds  
(II.5) Invariant manifolds $I_h$  
(II.6) Heteroclinic orbits  
(II.7) The flow on the collision manifold

## III THE FLOW FOR NON-NEGATIVE ENERGY LEVELS

(III.1) The case $h=0$  
(III.2) The case $h>0$

## IV THE FLOW ON NEGATIVE ENERGY LEVELS WHEN $\mu>9/8$

(IV.1) The intersection of the invariant manifolds with the surface of section $v=0$  
(IV.2) The Poincaré maps $g,f$ and $h$ on $v=0$  
(IV.3) The invariant manifolds under $g$ and $f$  
(IV.4) Geometrical interpretation of the neighbourhoods of the invariant manifolds
TABLE OF CONTENTS

(IV.5) Regions with a constant number of crossings with the $q_2$-axis, the map $S_{(\theta_0,\mu)}$ 65
(IV.6) Basic sets for dynamical description 69
(IV.7) A subshift as subsystem of $h$ 83
(IV.8) Gutzwiller's Theorem 91

(V) THE FLOW ON NEGATIVE ENERGY LEVELS WHEN $1<\mu<9/8$

(V.1) The intersection of the invariant manifolds with the surface of section $v=0$ 93
(V.2) Dynamical description 99

(VI) SYMMETRIC PERIODIC ORBITS

(VI.1) Definitions and preliminary results 100
(VI.2) The case $\mu=1$ 103
(VI.3) The case $\mu>9/8$ 104
