

INDEX

Introduction	1
PART I. THE BASIC CONCEPTS	
1. General Metric Spaces	5
2. Compact and Finitely Compact General Metric Spaces	6
3. Curves and their Lengths. Segments	8
4. Extremals	10
5. Example. The Minkowski Geometry	14
6. Example. The Quasihyperbolic Geometry	16
7. Local Homogeneity of E-spaces. The one-dimensional E-spaces	26
PART II. PERPENDICULARS AND PARALLELS	
8. Convexity of Spheres and Perpendicularity	34
9. Limitspheres and Corays	40
10. Asymptotes and Parallels	45
PART III. MOTIONS IN E-SPACES	
11. Axial Motions in E-spaces	52
12. Translations in Straight E-surfaces	58
13. Motions in Compact E-spaces	62
PART IV. E-SPACES WITH TRANSITIVE GROUPS OF MOTIONS	
14. E-spaces with Pairwise Transitive Groups of Motions	67
15. The Determination of all E-surfaces with Transitive Groups of Motions	69
PART V. E-SPACES WITH NON-POSITIVE CURVATURE	
16. Introduction	72
17. Straightness of the Universal Covering Space	80
Appendix I. The Funk Geometry	85
Appendix II. A Quasihyperbolic Plane	88
