

Contents

1. A Five-Lemma for Calculations in Homological Algebra	1
I The Five-Lemma Algorithm	1
II Spectral Sequences of Filtrations	6
III The Spectral Sequence of a Map	7
2. Fibrations with Calculable Homology	11
I Calculating the Base Term	14
II Calculating the Fiber Term	17
III Calculating Homology of Fiber Spaces	20
Calculating E^2 -terms	22
IV Applications	23
Loop Complexes, Rational Homotopy Groups	23
3. An Algorithm for Calculating Homotopy Groups	27
I Recalling $K(G, 1)$ -Complexes	27
II Calculating $K(G, 1)$ -Complexes	30
III Calculating Homotopy Groups	32
Homotopy Groups of Pairs	33
Homology Groups of Iterated Loop Complexes	33
IV The Horn-Filling Procedure	35
V Calculating Homology of Postnikov-Complexes	38
4. The Effective Computability of k-Invariants	45
I Calculating Cohomology Groups	46
II The Fundamental Cocycle Algorithm	48
III Postnikov-Complexes and k -Invariants	50
Application to Abelian Group Complexes	53
IV k -Invariants of Simple Fibrations	54
V Equivalence of k -Invariants is Decidable	58
