Contents

I Introduction 1

1 Introduction 3
- 1.1 Overview Intersecting Axes 5
- 1.2 Overview of the intertwining cases 8
- 1.3 Why an algorithm is needed 10

2 The Acute Triangle Theorem 13
- 2.1 Nielsen equivalence 13
  - 2.1.1 Groups and Triangles 14
  - 2.1.2 The Geometric Description of Trace Minimizing . 15
  - 2.1.3 Groups and pentagons 18
- 2.2 Idea of proof: Acute triangle theorem 19
- 2.3 Labeling Conventions 20
- 2.4 Ascending order conventions 21
- 2.5 The Triangle Algorithm 21
- 2.6 Q and the last triangle along A 25
- 2.7 Combining triangle algorithm steps 28
- 2.8 The sides and heights converge to 0 31
- 2.9 Acute triangle theorem: proof 31

3 Discreteness Theorem Proof Outline 33
- 3.1 The Discreteness Theorem 33
- 3.2 Discreteness theorem 35
- 3.3 Geometric equivalence theorems 36

II Preliminaries 39

4 Triangle Groups and their Tilings **41**
4.1 Basic facts about triangle groups 42
4.2 Minimal tiling distances 44
4.3 The wedge at a vertex 46
4.4 Proofs of lemmas and theorems 50
4.5 Additional Notation 55
4.6 Distances in the extended wedge 55

5 Pentagons **61**
5.1 Constructing the pentagon, $P_{A,B}$ 61
5.2 Notation 66
5.3 Applying the Poincaré Polygon Theorem 66
5.4 Pentagon Tilings 67
5.5 Distances in the shingling 68
5.6 Distance lemmas in P 71

6 Hyperbolic Formulae & Geometry **73**
6.1 Addition formulas for the hyperbolic sine and cosine . . . 73
6.2 Hyperbolic Triangles 74
6.3 Geometric Corollaries and Lemmas 75
6.3.1 Consequences of the Hyperbolic Law of Cosines . 75
6.3.2 Geometric corollaries for quadrilaterals and pentagons 76
6.3.3 The geometry of acute and equilateral triangles . 78

7 Extending Knapp & Poincaré **81**
7.1 Extending the Knapp Count 82
7.2 Facts and Notation 83
7.3 Restrict to $P = P_{A,B}$. 85
7.4 Counting the images of vertices 91

III Geometric Equivalence and the Discreteness Theorem **95**

8 The Standard Acute Triangles **97**
8.1 Stact: $(2,3,n)t = 3, k = 3$ 98

8.2 Stact: $(2,4,n)t = 2; k = 2$ 102
8.3 Stact: $(2,3,7)t = 9; k = 2$ 103
8.4 Pentagon distances $(2,3,n)t = 3; k = 3$ 107

9 Nielsen Eq: $(2,3,n)t = 3; k = 3$ **109**
9.1 Introduction 109
9.2 Types of triples: distances 110
9.3 Locating t_2 and t_3 110

10 Nielsen Eq: $(2,4,n)t = 2; k = 2$ **113**
10.1 Introduction 113
10.2 Types of triples 114
10.2.1 Distances in the standard pentagon 115
10.3 Location of t_1, t_2 and t_3 119

11 Pentagon $t = 9$ & 2-2 Spectrum **121**
11.1 Step 1: Label the wedge 122
11.2 Step 2: Double and Extend 123
11.3 Step 3: Drop perpendiculars 126
11.4 The two-two spectrum 129
11.5 More distance computations 130
11.6 Distances to q_0' 132
11.7 Locate three order two points 140

12 The Seven & Geometric Eq $t = 9$ **141**
12.1 Introduction 141
12.2 The variation of h and b 142
12.3 Rule out a seven on the β side 144
12.4 Rule out a seven on the D side 144
12.5 Interior sevens 146
12.6 Notation 148
12.6.1 $b = T_0$ 148
12.6.2 Rule out $b = 2T_0 = T_1$. 149
12.6.3 Rule out $\{\mathbf{q}, \mathbf{A}^{-1}(\mathbf{q}), \mathbf{q}'''\}$. 150
12.6.4 Rule out $b = T_2$. 151
12.7 Geometric equivalence $(2,3,7)t = 9; k = 2$ 156

13 Discreteness Theorem Proof **159**
13.1 The Proof of the Discreteness Theorem 159
13.2 The proof of sufficiency 161

IV The Real Number Algorithm and the Turing Machine Algorithm **165**

14 Forms of the Algorithm **167**
14.1 What is an algorithm? 168
14.1.1 Turing machine Algorithms 170
14.1.2 Real Number Algorithms 171
14.2 The Elliptic Order Algorithm 173
14.3 Notation and Preliminary Computations 176
14.3.1 Fixed points and cross-ratios 176
14.3.2 Computation of p_2 and γ 177
14.3.3 Positive and Negative Rotations 178
14.4 The Real Number Algorithm 179
14.5 The Turing Machine Algorithm 190

V Appendix **193**

A Verify Matelski-Beardon Count **195**

B A Summary of Notation **199**
