Abstract vii

Introduction 1

Chapter 1. Preliminaries and basic definitions 11
1.1. Twisted covariant systems and crossed products 11
1.2. Representation and ideal spaces of C^*-algebras 15
1.3. Morita equivalence and imprimitivity bimodules 16
1.4. Induced representations and the Mackey-Green machine 18

Chapter 2. Morita equivalent twisted actions and duality 29
2.1. Morita equivalent twisted actions 29
2.2. Morita equivalence and duality for abelian twisted systems 34

Chapter 3. Representations of type I abelian twisted systems 37
3.1. Maximally pointwise unitary subgroups 37
3.2. Abelian twisted systems with type I crossed products 44
3.3. Maximally pointwise unitary subgroups for dual systems 48

Chapter 4. Subgroup crossed products 55
4.1. Subgroup algebras and regularizations 55
4.2. Open regularizations and subgroup actions 61
4.3. Decomposition of crossed products by subgroup algebras 64
4.4. Subgroup crossed products and duality 69

Chapter 5. Crossed products with continuous trace 77
5.1. Subgroup crossed products and σ-proper G-spaces 77
5.2. Pointwise unitary subgroup actions 82
5.3. Systems with continuous choices of maximally pointwise unitary subgroups 91
5.4. Continuous trace for systems with Hausdorff quasi-orbit space 95
5.5. Systems with continuously varying stabilizers 100

Chapter 6. Applications and Examples 115

6.1. Crossed products by σ-proper actions 115
6.2. Actions of $\mathbb{R}$, $\mathbb{Z}$ and $\mathbb{T}$ 119
6.3. Examples and applications to certain group C^*-algebras 121

Some concluding remarks 129
