Introduction	1
Chapter 1. Preliminaries	6
1.1. Endomorphism algebras	7
1.2. Duality	13
1.3. Idempotents and quotient categories	17
1.4. Filtrations and spectral sequences	18
1.5. Base change	22
1.6. On the modular representation theory of symmetric groups	28
Chapter 2. Stratified algebras	37
2.1. Stratifications	37
2.2. Module-theoretic formulations	39
2.3. Stratified algebras and resolutions	43
Chapter 3. Stratifying endomorphism algebras	45
3.1. Constructing stratified algebras	45
3.2. Filtrations and tilting modules	50
3.3. A converse result: stratified algebras as endomorphism algebras	53
3.4. Tilting modules and the Ringel dual of a highest weight category	55
3.5. Stratification and recollement	59
3.6. An abstract theory of twisted Young modules	62
3.7. An abstract theory of Specht module socles	65
3.8. Ext^1 -vanishing and abstract Specht/Weyl equivalences	68
Chapter 4. Stratifications and orders in semisimple algebras	70
4.1. Integral endomorphism algebras	70
4.2. Z -stratified algebras	76
4.3. Integral stratification and recollement	78
4.4. An abstract theory of twisted integral Young modules	80
4.5. Integral theory and Specht module socles	89
4.6. Integral Ext^1 -vanishing and Specht/Weyl equivalences	92
4.7. Integral Ext^1 -vanishing and integral stratification	93

Chapter 5. Examples	95
5.1. On the Dlab-Heath-Marko construction	95
5.2. Schur algebras	97
5.3. Singular categories	103
5.4. The category \mathcal{O}	106
Chapter 6. Some conjectures for finite Coxeter groups and further remarks	108
6.1. Example 1: finite groups—a stratification of length 2	108
6.2. Example 2: the dihedral group of order 8	109
6.3. A stratification conjecture	110
6.4. Stratifying systems; a stronger conjecture	111
References	117
