

## Table of Contents

Introduction .....	1
Chapter I : Organization of orthogonal models and orbit structures .....	5
§1 : A review of basic notions and results .....	5
§2 : Orbit structures of linear groups of cohomogeneity $\leq 3$ .....	6
Chapter II : Orbit structures for G-spheres of cohomogeneity two .....	15
§1 : Weight patterns and calculation of orbit types .....	15
§2 : Simple weight patterns and the proof of Theorem D .....	18
Chapter III : The Reconstruction Problem .....	22
§1 : G-diffeomorphisms of manifolds of cohomogeneity one .....	23
§2 : G-disk bundles of cohomogeneity two and equivariant attaching ..	31
Chapter IV : G-spheres of cohomogeneity two with at most two isolated orbits .	34
§1 : Equivariant twisting of the orthogonal model .....	34
§2 : The basic lens spaces $L_k$ as 3-dimensional models .....	38
§3 : Construction of G-spheres with lens spaces $L_k$ as reduction ....	44
Chapter V : G-spheres of cohomogeneity two with three isolated orbits . . . .	56
§1 : Bad and good vertices in the orthogonal model .....	56
§2 : More examples of exotic G-spheres .....	64
Figures .....	72
References .....	74
