

CONTENTS

Abstract	viii
Introduction	1
1. Formal Laurent series and rational functions	7
2. Generating fields	13
3. The vertex operator algebra $N(k\Lambda_0)$	21
4. Modules over $N(k\Lambda_0)$	25
5. Relations on standard modules	32
6. Colored partitions, leading terms and the main results	40
7. Colored partitions allowing at least two embeddings	53
8. Relations among relations	58
9. Relations among relations for two embeddings	62
10. Linear independence of bases of standard modules	75
11. Some combinatorial identities of Rogers-Ramanujan type	83
Bibliography	89
