Abstract	ix
1 Introduction	1
2 What are Poincaré and Sobolev inequalities?	7
3 Poincaré inequalities, pointwise estimates, and Sobolev classes	11
4 Examples and necessary conditions	16
5 Sobolev type inequalities by means of Riesz potentials	21
6 Trudinger inequality	29
7 A version of the Sobolev embedding theorem on spheres	33
8 Rellich-Kondrachov	36
9 Sobolev classes in John domains	38
9.1 John domains	39
9.2 Sobolev type inequalities	43
10 Poincaré inequality: examples	46
10.1 Riemannian manifolds.	46
10.2 Upper gradients.	47
10.3 Topological manifolds.	49
10.4 Gluing and related constructions.	50
10.5 Further examples.	50
11 Carnot–Carathéodory spaces	51
11.1 Carnot–Carathéodory metric.	51
11.2 Upper gradients and Sobolev spaces.	55
11.3 Carnot groups.	64
11.4 Hörmander condition.	69
11.5 Further generalizations	71
12 Graphs	71

13 Applications to P.D.E and nonlinear potential theory	77
13.1 Admissible weights	77
13.2 Sobolev embedding for $0 < p < 1$	81
14 Appendix	83
14.1 Measures.	83
14.2 Uniform integrability.	85
14.3 L^p and L^p_w spaces.	86
14.4 Covering lemma.	87
14.5 Maximal function.	87
14.6 Lebesgue differentiation theorem.	88
