INTRODUCTION	1
Chapter 1. Class-groups of group-rings	4
1. Hom Descriptions	4
2. The class-group of $\mathbf{Z}[Q_8]$	9
3. The second Chinburg conjecture	13
Chapter 2. The evaluation of $[X]$	17
1. A Hom-description representative of $[X]$	17
2. Kim's Examples	22
Chapter 3. Quaternion fields over $\mathbf{Q}_2$	28
1. Galois actions	28
2. Fundamental 2-extensions	32
3. The fundamental 2-extension in Case A	39
4. The fundamental 2-extension in Case B	45
5. The fundamental 2-extension in Case C	55
Chapter 4. The Invariant in Cases A, B and C	67
1. The strategy of the calculation	67
2. Evaluating $[Ker(k')]$ in Case A	70
3. Evaluating $[Ker(k')]$ in Case B	80
4. Evaluating $[Ker(k')]$ in Case C	86
Chapter 5. The evaluation of $[M]$	92
1. The class $[M]$ in Case A	92
2. The class $[M]$ in Case B	112
3. The class $[M]$ in Case C	117
Chapter 6. The conjecture in Cases A, B and C	124
1. Evaluation of $[X]$ in Cases A, B and C	124
2. The proof in Cases A, B and C	127
Chapter 7. Epilogue	128
1. Related and Subsequent Results	128
Bibliography	130
Index	133
