

# CONTENTS

0. Introduction.	1.
1. The universal pseudo-quotient for a family of subvarieties.	23.
2. Normal bundles of quadrics in $X$	
— The splitting type on lines.	39.
3. Morphisms from quadrics to Grassmannians.	49.
4. Pointwise uniform vector bundles on non-singular quadrics.	57.
5. Theory of extensions of families over Hilbert schemes.	69.
6. Existence of algebraic quotient — proof of Theorem 0.3.	93.
A. Appendix. Deformations of vector bundles on infinitesimally rigid projective varieties with null global $i$ -forms.	97.
References.	105.
