Contents

1 Introduction **1**

1.1 Classical necessary conditions 1
1.2 Differential inclusions 4
1.3 Nonsmooth analysis 12
1.4 Notes 15

2 Boundary Trajectories **17**

2.1 A preparation theorem 17
2.2 An integral cost functional 26
2.3 A general theorem on boundary trajectories 28
2.4 Proof of the theorem 29
2.5 Two variants of the theorem 37
2.6 Notes 39

3 Differential Inclusions **41**

3.1 Stratified necessary conditions 41
3.2 On the tempered growth condition 45
3.3 The case of a weak local minimum 47
3.4 The second Erdmann condition 49
3.5 Proximal criteria for pseudo-Lipschitzness 52
3.6 Notes 58

4 The Calculus of Variations **61**

4.1 Stratified necessary conditions 61
4.2 A classical multiplier rule 66
4.3 Generalized Tonelli-Morrey integrands 68
4.4 Finite Lagrangians 72
4.5 Three regularity theorems 76
4.6 Notes 80

5 Optimal Control of Vector Fields **83**
5.1 A stratified maximum principle 83
5.2 Indirect criteria for pseudo-Lipschitzness 89
5.3 A hybrid maximum principle 91
5.4 Notes 96

6 The Hamiltonian inclusion **99**
6.1 Boundary trajectories 101
6.2 Notes 104

Bibliography **105**

Index **111**
