

Contents

Introduction	1
Chapter 1. Motivic integration	7
1. Grothendieck ring of varieties	7
2. The arc space of a variety	7
3. Local Denef-Loeser motivic zeta function	8
Chapter 2. Generating functions and Newton polyhedra	11
1. Generating functions for integer points in rational polyhedra	11
2. Motivic zeta function and Newton polyhedra	13
Chapter 3. Quasi-ordinary power series	21
1. Characteristic exponents	22
2. Newton polyhedron and good coordinates	23
3. Dual decomposition	26
4. Newton map associated with a Newton component	29
5. Transversal sections of a quasi-ordinary power series	37
Chapter 4. Denef-Loeser motivic zeta function under the Newton maps	41
1. Vertices of the dual decomposition	46
2. Edges of the Newton polytope	49
3. Zeta functions along strata	59
Chapter 5. Consequences of the main theorems	63
1. Essential variables	63
2. Curve case	63
3. The topological zeta function	64
4. A special candidate pole	65
Chapter 6. Monodromy conjecture for quasi-ordinary power series	77
1. Monodromy conjecture for curves	77
2. Monodromy conjecture: general case	79
3. Monodromy conjecture for the Igusa zeta-function	80
Bibliography	83
