

1. INTRODUCTION	1
2. THE INFINITARY LOGIC $L_{\omega_1\omega}$	7
2.1. The syntax of $L_{\omega_1\omega}$	8
2.2. The semantics of $L_{\omega_1\omega}$	10
2.3. Proofs in $L_{\omega_1\omega}$	12
3. DESCRIBING STATE TRANSFORMATIONS	15
3.1. Syntax of descriptions	15
3.2. Semantics of descriptions	18
3.3. Strong and weak termination	24
4. REFINEMENT AND WEAKEST PRECONDITIONS	27
4.1. Refinement between descriptions	27
4.2. Weakest preconditions	30
5. PROVING REFINEMENT BETWEEN DESCRIPTIONS	33
5.1. Weakest preconditions of descriptions	33
5.2. A proof rule for refinement	40
5.3. Basic properties of weakest preconditions	45
5.4. Replacements in descriptions	47
6. STEPWISE REFINEMENT USING DESCRIPTIONS	51
6.1. An example of the use of stepwise refinement	51
6.2. Correct refinement using descriptions	55
6.3. Program descriptions	67
7. FORMAL DEVELOPMENT OF PROGRAMS	77
7.1. An example of formal program development	78
7.2. Proof rules for implementations	84
7.3. Transformation rules for assertions	92
7.4. Transformation rules for control structures	96
7.5. Transformation rules for abstraction	99
