

1. INTRODUCTION	1
1.1. Some typical problems	1
1.2. Organization	3
1.3. Abbreviations and conventions	5
1.4. Some probability theory	6
1.5. Some real analysis	8
2. STABLE DISTRIBUTIONS	10
2.1. General theory	10
2.2. Domains of attraction	16
3. STABLE PROCESSES	20
3.1. The Wiener process	20
3.2. Stable processes	22
3.3. Some lemmas for the case $\alpha = 2$	25
3.4. The case $0 < \alpha < 1$	29
3.5. The case $\alpha = 1$	31
3.6. The case $1 < \alpha < 2$	35
4. GENERALIZED LAWS OF THE ITERATED LOGARITHM FOR SMALL TIMES	37
4.1. The case $\alpha = 2$	37
4.2. The case $0 < \alpha < 1$	38
4.3. The case $\alpha = 1$	38
4.4. The case $1 < \alpha < 2$	45
5. GENERALIZED LAWS OF THE ITERATED LOGARITHM FOR LARGE TIMES	47
5.1. The case $\alpha = 2$	47
5.2. The case $0 < \alpha < 1$	48
5.3. The case $\alpha = 1$	48
5.4. The case $1 < \alpha < 2$	49
6. GENERALIZED LAWS OF THE ITERATED LOGARITHM FOR PARTIAL SUMS	50
6.1. The case $\alpha = 2$	50
6.2. The case $0 < \alpha < 1$	52
6.3. The case $\alpha = 1$	53
6.4. The case $1 < \alpha < 2$	55

7. HÖLDER-TYPE THEOREMS	57
7.1. The case $\alpha = 2$	57
7.2. The case $0 < \alpha < 1$	58
7.3. The case $\alpha = 1$	64
7.4. The case $1 < \alpha < 2$	66
8. L.I.L.-TYPE THEOREMS FOR THE HEAVY TAILS	68
8.1. Partial sums	68
8.2. Large times	79
8.3. Small times	81
9. FUNCTIONAL LAW OF THE ITERATED LOGARITHM	82
9.1. The case $\alpha = 2$	83
9.2. The case $0 < \alpha < 1$	83
9.3. The case $\alpha = 1$	93
9.4. The case $1 < \alpha < 2$	102
10. DOMAINS OF ATTRACTION	108
10.1. The case $\alpha = 2$	108
10.2. The case $\alpha \neq 2$	109
