

CONTENTS

<u>Introduction.</u>	1	
<u>Surveys:</u>		
S. A. Amitsur,	Division algebras, a survey	3
M. Auslander,	Representation theory of finite dimensional algebras	27
E. Formanek,	The polynomial identities of matrices	41
T. A. Springer,	The order of a finite group of Lie type	81
J. E. Humphreys,	Restricted Lie algebras (and beyond)	91
<u>Addresses:</u>		
P. M. Cohn,	Determinants on free fields	99
M. E. Sweedler,	Weak cohomology	109
<u>Papers in Ring Theory:</u>		
M. Schacher,	Applications of the classification of finite simple groups to Brauer groups	121
D. Saltman,	Generic structures and field theory	127
D. Haile,	Balanced spaces of forms and skew cyclic transformations	135
A. Klein,	Rings with bounded index of nilpotence	151
J. Zelmanowitz,	On the Jacobson density theorem	155
I. N. Herstein,	Derivations of prime rings having power-central values	163
W. S. Martindale,	Lie and Jordan mappings	173
B. Osofsky,	Some properties of rings reflected in endo- morphism rings of free modules	179
C. C. Faith,	On the Galois theory of commutative rings I: Dedekind's theorem on the independence of automorphisms revisited	183
M. Gerstenhaber and S. D. Schack	On the deformation of diagrams of algebras	193
M. Lorenz and L. W. Small	On the Gelfand-Kirillov dimensions of noether- ian PI-algebras	199
L. H. Rowen,	A simple proof of Kostant's theorem, and an analogue for the symplectic involution	207
W. Schelter,	Affine rings satisfying a polynomial identity	217
M. Artin,	Algebraic structure of power series rings	223

C. Huneke,	Linkage and the symmetric algebra of ideals	229
S. Steinberg,	Polynomial constraints in lattice-ordered rings	237
<u>Lie, Jordan and Nonassociative Systems:</u>		
W. Feit and G. J. Zuckerman,	Reality properties of conjugacy classes in spin groups and symplectic groups	239
G. B. Seligman,	Variations on even Clifford algebras	255
G. M. Benkart and J. M. Osborn,	On the determination of rank one Lie algebras of prime characteristic	263
R. E. Block,	Restricted simple Lie algebras of rank 2 or of toral rank 2	267
R. L. Wilson,	Restricted simple Lie algebras with toral Cartan subalgebras	273
K. McCrimmon,	Composition triples	279
B. Harris,	Triple products, modular forms and harmonic volumes	287
W. G. Lister,	Bivariants of ternary rings	297
R. Bix,	Separable alternative algebras over commutative rings	305
H. Petersson and M. Racine	Exceptional Jordan division algebras	307
J. K. Faulkner,	An apology for Jordan algebras in quantum theory	317
L. Hogben,	Identities of non-associative algebras studied by computer	321
<u>Galois Theory and Other Topics:</u>		
T. Tamagawa,	On regularly closed fields	325
P. Blass,	Some geometric applications of a differential equation in characteristic $p > 0$ to the theory of algebraic surfaces	335
R. P. Infante,	On the inverse problem in difference Galois theory	349
H. F. Kreimer,	Quadratic Hopf algebras and Galois extensions	353
W. D. Nichols and E. J. Taft,	The left antipodes of a left Hopf algebra	363
D. Zelinsky,	Similarity of nilpotent integer matrices, or, four elementary categories	369
I. Kaplansky,	Normal antilinear operators on a Hilbert space	379
S. MacLane,	Why commutative diagrams coincide with equivalent proofs	387
D. J. Winter,	Axiomatic game theory	403
