

## TABLE OF CONTENTS

Introduction	1
I. Fixed point classes and the Nielsen number	4
§1. Lifting classes and fixed point classes	7
§2. The influence of a homotopy	7
§3. The fixed point index	11
§4. Nielsen number and its homotopy invariance	17
§5. The commutativity	19
§6. The least number of fixed points	22
II. Computation of the Nielsen number	24
§1. Coordinates for lifting classes	24
§2. A lower bound for the Reidemeister number	27
§3. The trace subgroup of cyclic homotopies	29
§4. Permutations induced by cyclic homotopies	33
§5. Polyhedra with a finite fundamental group	36
§6. Converses of the Lefschetz fixed point theorem	38
III. The fixed point class functor	41
§1. The category of self-maps and the fixed-point-class functor	41
§2. Fixed point classes modulo a normal subgroup	48
§3. Fixed point classes of the iterates	54
§4. The least number of periodic points	63

IV. Fixed point classes of a fiber map	73
§1. Fiber maps	73
§2. Fixed point classes in the fiber	79
§3. Essential fixed point classes in the total space	84
§4. Product formulas for the Nielsen number	87
Historical Index	94
Bibliography	97
Index	100
