Foreword	ix
Acknowledgments	xi
Finite dimensional decompositions in Banach spaces P. G. Casazza	1
Some theorems on the geometry of Banach spaces arising from the study of invariant means Edmond E. Granirer	32
The Radon-Nikodym and Krein-Milman properties for convex sets Robert C. James	43
The metric linear spaces L_p for $0 < p < 1$ N. J. Kalton	55
The unconditional basic sequence problem Haskell P. Rosenthal	70
A lemma on matrices and its applications Piotr Antosik	89
Applications of geometry of infinite dimensional spaces to vector measures R. G. Bilyeu and P. W. Lewis	96
Minimax theorems without convexity M. A. Geraghty and Bor-Luh Lin	102
Approximative compactness in Kadec-Klee spaces Robert E. Megginson	109
Gul'ko's proof of the Amir-Lindenstrauss theorem I. Namioka and R. F. Wheeler	113
Continuous selections of complemented subspaces Horacio Porta and Lázaro Recht	121
Exposed points and the Radon-Nikodym property Elias Saab	126
On complemented copies of c_0 in injective tensor products Elias Saab and Paulette Saab	131
A note on girth and isomorphic classification of normed spaces Juan Jorge Schaffer	136
Rotundity and extremity in $\ell^p(X_1)$ and $L^p(\mu, X)$ Mark A. Smith	143
Orthogonality and linear homomorphisms in Banach lattices K. Sundaresan and S. Swaminathan	163
Daysong Bruce Reznick	170
