

## CONTENTS

Preface	ix
Workshop Participants	xi
Titles of seminars given during the Workshop	xiii
Isometries of James space STEVEN F. BELLENOT	1
Quasi-reflexive and tree spaces constructed in the spirit of R. C. James STEVEN BELLENOT, RICHARD HAYDON and EDWARD ODELL	19
Projections onto block bases PETER G. CASAZZA	45
The Schroeder–Bernstein property for Banach spaces PETER G. CASAZZA	61
Rotund reflexive Orlicz spaces are fully convex SHUTAO CHEN, BOR-LUH LIN and XINTAI YU	79
Biorthogonal systems and big quotient spaces CATHERINE FINET and GILLES GODEFROY	87
Analytic martingales and plurisubharmonic barriers in complex Banach spaces N. GHOUSSOUB, J. LINDENSTRAUSS and B. MAUREY	111
Existence and uniqueness of isometric preduals: A survey GILLES GODEFROY	131
The ball topology and its applications G. GODEFROY and N. J. KALTON	195
On the closedness of the sum of closed operators on a UMD space SYLVIE GUERRE	239
Ultrapowers of rearrangement-invariant function spaces I RICHARD HAYDON and PEI-KEE LIN	253
KMP, RNP, and PCP for Banach spaces R. C. JAMES	281

Independence in separable Banach spaces N. J. KALTON	319
On the weak*-fixed point property M. A. KHAMSI	325
Some geometrical and topological properties of the unit sphere in a normed linear space BOR-LUH LIN, PEI-KEE LIN and S. L. TROYANSKI	339
The $\lambda$ -function in Banach spaces ROBERT H. LOHMAN	345
Smooth functions in Orlicz spaces R. P. MALEEV and S. L. TROYANSKI	355
Fefferman spaces and $C^*$ -algebras PAUL S. MUHLY	371
$JH^*$ has the PCP E. ODELL and C. S. SCHUMACHER	387
An analogue of the F. and M. Riesz theorem for spaces of differential functions A. PELCZYŃSKI	405
Almost isometric methods in some isomorphic embedding problems YVES RAYNAUD	427
Sub-simplexes of convex sets and some characterizations of simplexes with the RNP HASKELL P. ROSENTHAL	447
Some more remarkable properties of the James-tree space WALTER SCHACHERMAYER	465
A note on the Lavrientiev index for the quasi-reflexive Banach spaces A. SERSOURI	497
$\omega$ -independence in non separable Banach spaces ABDERRAZZAK SERSOURI	509
The canonical injection for $C([0, 1])$ into $L_{2,1}$ is not of cotype 2 MICHEL TALAGRAND	513
