Introduction	xv
Biographical Note, by J. Oxtoby	xvii
Publications of Dorothy Maharam Stone	xix
List of Participants	xxiii
Invariance of Rényi full conditional probabilities under group actions Thomas E. Armstrong	1
Proximal roots of minimal homeomorphisms Joseph Auslander and Nelson Markley	23
On the Loś-Marczewski extension of charges and its uniqueness E. Barone and K. P. S. Bhaskara Rao	35
Marczewski null sets and intermediate Baire order Jack B. Brown	43
Fixed points of automorphisms of I^{\aleph_1} Maxim R. Burke	51
The work of Dorothy Maharam on measure theory, ergodic theory, and category algebras J. R. Choksi, S. J. Eigen, J. C. Oxtoby, and V. S. Prasad	57
Ergodic theory on homogeneous measure algebras revisited J. R. Choksi, S. J. Eigen, and V. S. Prasad	73
Axiomatic characterizations of inhomogeneous Poisson point processes (IPPP) their mixtures and random translations J. P. R. Christensen and C. Rasmussen	87
Uniformly distributed D -sequences John Coffey	97

On maximal inequalities in Orlicz spaces G. A. Edgar and L. Sucheston	113
Finite full sets in 2-stack structures Stanley J. Eigen and Cesar E. Silva	131
Partial mixing, partial rigidity, and factors Nathaniel A. Friedman	141
A classification of disintegrations of measures Siegfried Graf and R. Daniel Mauldin	147
Ratio sets of endomorphisms which preserve a probability measure Jane M. Hawkins	159
An obstruction to K -fold splitting Jonathan L. King	171
The work of Dorothy Maharam on kernel representations of linear operators W. A. J. Luxemburg	177
One-to-one selections and orthogonal transition kernels R. Daniel Mauldin	185
Descriptive ergodic theory M. G. Nadkarni	191
Decoding with two independent processes William Parry	207
Temporal and spatial distribution of closed orbits of hyperbolic dynamical systems William Parry	211
Nonlinear sampling of a flow Karl Petersen	217
Classification problem for probability metrics S. T. Rachev and R. M. Shortt	221
A new proof of Hopf's theorem on invariant measures D. Ramachandran	263
Markov tilings of \mathbf{R}^n and representations of \mathbf{R}^n actions Daniel J. Rudolph	271

Groups of measurable automorphisms for spaces of finite type R. M. Shortt	291
A “regular oscillation” property of stable sets of measurable functions Michel Talagrand	309
A new proof of the strong law without first moment D. Tanny	315
Countable generators in dynamics-universal minimal models Benjamin Weiss	321
