Introduction	4
1 Weak solutions to boundary value problems in the deformation theory of perfect elastoplasticity	8
1.0 Preliminaries	8
1.1 The classical boundary value problem for the equilibrium state of a perfect elastoplastic body and its primary functional formulation	10
1.2 Relaxation of convex variational problems in non reflexive spaces. General construction	19
1.3 Weak solutions to variational problems of perfect elastoplasticity	32
2 Differentiability properties of weak solutions to boundary value problems in the deformation theory of plasticity	46
2.0 Preliminaries	46
2.1 Formulation of the main results	48
2.2 Approximation and proof of Lemma 2.1.1	60
2.3 Proof of Theorem 2.1.1 and a local estimate of Caccioppoli type for the stress tensor	65
2.4 Estimates for certain systems of PDE's with constant coefficients	803
2.5 The main lemma and its iteration	85
2.6 Proof of Theorem 2.1.2	99
2.7 Open Problems	108
2.8 Remarks on the regularity of minimizers of variational functionals from the deformation theory of plasticity with power hardening	110

Appendix A	116
A.1 Density of smooth functions in spaces of tensor-valued functions	116
A.2 Density of smooth functions in spaces of vector-valued functions	120
A.3 Some properties of the space $BD(\Omega; \mathbb{R}^n)$	126
A.4 Jensen's Inequality	137
3 Quasi-static fluids of generalized Newtonian type	142
3.0 Preliminaries	142
3.1 Partial C^1 regularity in the variational setting	155
3.2 Local boundedness of the strain velocity	181
3.3 The two-dimensional case	196
3.4 The Bingham variational inequality in dimensions two and three	209
3.5 Some open problems and comments concerning extensions	221
4 Fluids of Prandtl–Eyring type and plastic materials with logarithmic hardening law	224
4.0 Preliminaries	224
4.1 Some function spaces related to the Prandtl–Eyring fluid model	228
4.2 Existence of higher order weak derivatives and a Caccioppoli-type inequality	234
4.3 Blow-up: the proof of Theorem 4.1.1 for $n = 3$	247
4.4 The two-dimensional case	255
4.5 Partial regularity for plastic materials with logarithmic hardening	258
4.6 A general class of constitutive relations	269
Appendix B	272
B.1 Density results	272
Bibliography	275
