

CONTENTS

C. ATKINSON, Asymptotic methods applied to problems of diffusion, crack propagation and crack tip stress analysis	7-48
C. E. BEEVERS, On thermodynamics and stability of continuous media	49-70
G. CAPRIZ, Introductory remarks to the dynamics of continua with microstructure	71-95
C. CERCIGNANI, Mathematical problems in the kinetic theory of gases.	97-159
D. R. J. CHILLINGWORTH, Notes on some recent methods in bifurcation theory	161-174
M. COSTABEL and E. STEPHAN, Boundary integral equations for mixed boundary value problems in polygonal domains and Galerkin approximation	175-251
A. DAMLAMIAN, On the Stefan problem: the variational approach and some applications	253-275
K. HUTTER, Mathematical foundation of flow of glaciers and large ice masses.	277-322
A. M. KOVALEV (А. М. КОВАЛЕВ), Устойчивость, управляемость, наблюдаемость нелинейных механических систем с приложениями к задачам динамики твердого тела	323-358
E. MEISTER, Some multiple-part Wiener-Hopf problems in mathematical physics	359-407
Yu. A. MITROPOLSKII (Ю. А. МИТРОПОЛЬСКИЙ), О приводимости дифференциальных уравнений нелинейной механики	409-486
N. F. MOROZOV (Н. Ф. МОРОЗОВ), Математические вопросы теории хрупкого разрушения	487-541
I. MÜLLER, Thermodynamics of simple mixtures of fluids with application to second sound and liquid helium	543-592
W. NOWACKI, Mathematical models of phenomenological piezoelectricity	593-607
L. E. PAYNE, "Best possible" maximum principles	609-619
L. E. PAYNE, On stability and growth of solutions for classes of initial and boundary value problems	621-643
G. F. SMITH, Lectures on constitutive expressions	645-678
K. STEWARTSON, Marginally stable inviscid flows with critical layers	679-725
