

CONTENTS

1. NUMBERS AND NUMBER SYSTEMS	1
A. Sets and sub-sets	1
B. One-to-one correspondence	3
C. Cardinal numbers	4
D. Counting	7
E. Number systems	9
2. OPERATIONS WITH SETS AND NUMBERS	15
A. The union and intersection of sets	15
1. The union and intersection of two sets	15
2. The union and intersection of more than two sets	18
B. Operations with numbers	22
1. Addition	22
(a) The addition of two natural numbers	22
(b) The addition of more than two natural numbers	24
2. Multiplication	26
3. Subtraction	28
4. Division	29
C. Properties of sets and number systems	30
1. The commutative property	30
2. The associative property	32
3. The distributive property	33
D. Identity elements	34
3. WRITTEN RECKONING	36
A. Addition	37
B. Multiplication	39
C. Subtraction	44
D. Division	45
E. The use of the index notation in written reckoning	48
1. The index notation	48
2. Using the index notation in multiplication and division	50
4. GEOMETRICAL FORM	51
A. The natural occurrence of mathematical shapes	51
B. Naming some of the common shapes	54
C. Breaking down and constructing some shapes	56
5. PLANE SHAPES	58
A. Familiar plane shapes	58
B. Ways in which plane shapes arise	59
1. Plane shapes arising from motion	60
2. Plans, elevations, and sections	62
3. Plane shapes arising from sets of straight lines	66

6. A SET OF NEW NUMBERS	70
A. The need for new numbers	70
B. Introducing the new numbers	71
C. Operations with the integers	72
1. The addition operation	73
2. The subtraction operation	75
3. The multiplication operation	76
4. The division operation	78
5. Summary	79
D. Inequalities	80
7. FRACTIONAL PARTS	84
A. Common fractions	84
B. Decimal fractions	87
8. ANOTHER SET OF NEW NUMBERS	90
A. The need for more new numbers	90
B. Operations with the rational numbers	93
1. The multiplication operation	93
2. The division operation	96
3. The addition operation	96
4. The subtraction operation	99
C. The rationals and number lines	101
D. Inequalities	107
E. Another look at the number line	108
F. Using number lines in graphical work	110
G. Extending the use of the index notation	114
9. MEASURING AND THE METRIC SYSTEM	116
A. The origins of the metric system	116
B. Using the metric units	117
1. Length	117
2. Area	122
3. Volume	128
4. Weight	133
5. Capacity	134
C. Some other measures	135
1. Angular measure	135
2. Time	145
D. The complete metric notation	147
10. MOVING AND CHANGING SHAPES	149
A. Translations	149
1. Translating points	149
2. Translating sets of points	152
B. Rotations	159
1. Rotating points	159
2. Rotating sets of points	160

C. Reflections	164
1. Reflection in a straight line	164
2. Reflections in a pair of parallel lines	168
3. Reflections in a pair of intersecting lines	173
D. Summary	179
11. A PATTERN EMERGES	180
A. More about sets and operations	180
1. Interchanging the wheels of a car	180
2. Moving the wheels round	184
3. Rotating a star	186
B. An emerging pattern	189
ANSWERS	191
INDEX	211

PREFACE

This book has been written for students and teachers who wish to become more familiar with present-day developments in school mathematics. It attempts to present a unified approach to the subject.

The general aim of Part I is to introduce something of the new spirit in school mathematics without over-emphasizing mathematical rigour. In Part II the work is developed in such a way as to bring out the underlying structure of the subject.

Through the many practical activities and exercises the readers will be able to make progress by their own discoveries. Thus, while the content is primarily concerned with mathematics itself, the approach used indicates ways of developing the work in the classroom.
