

CONTENTS

Preface	ix
Chapter 1. Infinite Ascent, Infinite Descent:	
The Principle of Mathematical Induction	3
1. Patterns	4
Problems	9
2. Proof by Induction	15
Problems	18
3. Applications	22
Problems	34
4. Infinite Descent	38
Problems	53
Chapter 2. Patterns, Polynomials, and Primes:	
Three Applications of the Binomial Theorem	57
1. Disorder among the Primes	58
Problems	70
2. Summing the Powers of the Integers	74
Problems	94
3. Two Theorems of Fermat, the “Little” and the “Great”	100
Problems	114
Chapter 3. Fibonacci Numbers: Function and Form	123
1. Elementary Properties	125
Problems	134

2. The Golden Ratio	140
Problems	154
3. Generating Functions	159
Problems	164
4. Iterated Functions: From Order to Chaos	170
Problems	180
Chapter 4. On the Average	185
1. The Theorem of the Means	186
Problems	197
2. The Law of Errors	206
Problems	216
3. Variations on a Theme	219
Problems	239
Chapter 5. Approximation: From Pi to the Prime Number Theorem	247
1. "Luck Runs in Circles"	248
Problems	255
2. On the Probability Integral	267
Problems	272
3. Polynomial Approximation and the Dirac Delta Function	274
Problems	282
4. Euler's Proof of the Infinitude of the Primes	287
Problems	293
5. The Prime Number Theorem	296
Problems	306
Chapter 6. Infinite Sums: A Potpourri	309
1. Geometry and the Geometric Series	310
Problems	328
2. Summing the Reciprocals of the Squares	338
Problems	349
3. The Pentagonal Number Theorem	357
Appendix: The Congruence Notation	369
Problems	375
References	379
Sources for Solutions	397
Index	409
