Foreword	ix
Notation	xi
Introduction	xiii
<b>1 Examples in low degree</b>	<b>1</b>
1.1 The groups $\mathbf{Z}/2\mathbf{Z}$ , $\mathbf{Z}/3\mathbf{Z}$ , and $S_3$ . . . . .	1
1.2 The group $C_4$ . . . . .	2
1.3 Application of tori to abelian Galois groups of exponent 2, 3, 4, 6 . . . . .	6
<b>2 Nilpotent and solvable groups as Galois groups over <math>\mathbf{Q}</math></b>	<b>9</b>
2.1 A theorem of Scholz-Reichardt . . . . .	9
2.2 The Frattini subgroup of a finite group . . . . .	16
<b>3 Hilbert's irreducibility theorem</b>	<b>19</b>
3.1 The Hilbert property . . . . .	19
3.2 Properties of thin sets . . . . .	21
3.2.1 Extension of scalars . . . . .	21
3.2.2 Intersections with linear subvarieties . . . . .	22
3.3 Irreducibility theorem and thin sets . . . . .	23
3.4 Hilbert's irreducibility theorem . . . . .	25
3.5 Hilbert property and weak approximation . . . . .	27
3.6 Proofs of prop. 3.5.1 and 3.5.2 . . . . .	30
<b>4 Galois extensions of <math>\mathbf{Q}(T)</math>: first examples</b>	<b>35</b>
4.1 The property $\text{Gal}_T$ . . . . .	35
4.2 Abelian groups . . . . .	36
4.3 Example: the quaternion group $Q_8$ . . . . .	38
4.4 Symmetric groups . . . . .	39
4.5 The alternating group $A_n$ . . . . .	43
4.6 Finding good specializations of $T$ . . . . .	44

<b>5</b>	<b>Galois extensions of <math>\mathbb{Q}(T)</math> given by torsion on elliptic curves</b>	<b>47</b>
5.1	Statement of Shih's theorem . . . . .	47
5.2	An auxiliary construction . . . . .	48
5.3	Proof of Shih's theorem . . . . .	49
5.4	A complement . . . . .	52
5.5	Further results on $\mathrm{PSL}_2(\mathbb{F}_q)$ and $\mathrm{SL}_2(\mathbb{F}_q)$ as Galois groups . .	53
<b>6</b>	<b>Galois extensions of <math>\mathbb{C}(T)</math></b>	<b>55</b>
6.1	The GAGA principle . . . . .	55
6.2	Coverings of Riemann surfaces . . . . .	57
6.3	From $\mathbb{C}$ to $\bar{\mathbb{Q}}$ . . . . .	57
6.4	Appendix: universal ramified coverings of Riemann surfaces with signature . . . . .	60
<b>7</b>	<b>Rigidity and rationality on finite groups</b>	<b>65</b>
7.1	Rationality . . . . .	65
7.2	Counting solutions of equations in finite groups . . . . .	67
7.3	Rigidity of a family of conjugacy classes . . . . .	70
7.4	Examples of rigidity . . . . .	72
7.4.1	The symmetric group $S_n$ . . . . .	72
7.4.2	The alternating group $A_5$ . . . . .	73
7.4.3	The groups $\mathrm{PSL}_2(\mathbb{F}_p)$ . . . . .	74
7.4.4	The group $\mathrm{SL}_2(\mathbb{F}_8)$ . . . . .	75
7.4.5	The Janko group $J_1$ . . . . .	77
7.4.6	The Hall-Janko group $J_2$ . . . . .	78
7.4.7	The Fischer-Griess Monster $M$ . . . . .	78
<b>8</b>	<b>Construction of Galois extensions of <math>\mathbb{Q}(T)</math> by the rigidity method</b>	<b>81</b>
8.1	The main theorem . . . . .	81
8.2	Two variants . . . . .	83
8.2.1	First variant . . . . .	83
8.2.2	Second variant . . . . .	84
8.3	Examples . . . . .	85
8.3.1	The symmetric group $S_n$ . . . . .	85
8.3.2	The alternating group $A_5$ . . . . .	86
8.3.3	The group $\mathrm{PSL}_2(\mathbb{F}_p)$ . . . . .	87
8.3.4	The Gal $_T$ property for the smallest simple groups . . .	88
8.4	Local properties . . . . .	88
8.4.1	Preliminaries . . . . .	88
8.4.2	A problem on good reduction . . . . .	89
8.4.3	The real case . . . . .	90
8.4.4	The $p$ -adic case: a theorem of Harbater . . . . .	93

<b>9</b>	<b>The form <math>\text{Tr}(x^2)</math> and its applications</b>	<b>95</b>
9.1	Preliminaries . . . . .	95
9.1.1	Galois cohomology (mod 2) . . . . .	95
9.1.2	Quadratic forms . . . . .	95
9.1.3	Cohomology of $S_n$ . . . . .	97
9.2	The quadratic form $\text{Tr}(x^2)$ . . . . .	98
9.3	Application to extensions with Galois group $\tilde{A}_n$ . . . . .	99
<b>10</b>	<b>Appendix: the large sieve inequality</b>	<b>103</b>
10.1	Statement of the theorem . . . . .	103
10.2	A lemma on finite groups . . . . .	105
10.3	The Davenport-Halberstam theorem . . . . .	105
10.4	Combining the information . . . . .	107
	<b>Bibliography</b>	<b>109</b>
	<b>Index</b>	<b>117</b>
