Foreword	ix
Chapter 1. Preliminary Information about the Embedding Problem	1
§1. Statement of the problem	1
§2. A module of the regular representation of a finite group	2
§3. S -Algebras	3
§4. Galois algebras	4
§5. The standard representation of a Galois algebra	5
§6. The algebra of T -invariant elements of a Galois algebra	7
§7. Generalized Galois algebras	9
§8. Speiser's theorem for a Galois algebra	11
§9. The semidirect embedding problem	12
§10. Associated problems	12
§11. An extension of the base field	13
§12. Direct multiplication of embedding problems	14
§13. Lifting, descent, and factorization of embedding problems	15
§14. A splitting field for the embedding problem	18
§15. Look "from above" at the embedding problem	21
Chapter 2. The Compatibility Condition	23
§1. The crossed products	23
§2. The compatibility module	24
§3. Compatibility for a problem with Galois algebra	26
§4. Inheritance of compatibility for associated problems	27
§5. Multiplication	28
§6. Lifting and descent	28
§7. Compatibility systems	29
§8. The structure of the crossed product $G \times K$	29
§9. Reduction of the compatibility condition	33
Chapter 3. The Embedding Problem with Abelian Kernel	37
§1. The Brauer problem with cyclic kernel	37
§2. The Brauer problem with Abelian kernel	38
§3. The compatibility condition and the solvability of the associated Brauer problems	39
§4. The embedding problem with cyclic kernel	40
§5. The first Kochendörffer theorem	44
§6. Free normal extensions of normal fields	44
§7. The generalized wreath product	46

§8. The second Kochendörffer theorem	49
§9. The Artin–Schreier theorem	50
§10. Witt's theorem	50
§11. Embedding conditions	51
§12. The semidirect embedding problem with Abelian kernel	55
§13. The second approach to the description of embedding conditions	56
§14. Embedding conditions for local and global fields	60
§15. Composition law on the set of solutions of the embedding problem	64
Chapter 4. The Embedding Problem for Local Fields	75
§1. The embedding problem for local fields	75
§2. Proper solutions of the embedding problem for local fields	83
Chapter 5. The Embedding Problem with Non-Abelian Kernel for Algebraic Number Fields	93
§1. The embedding problem with non-Abelian kernel of order p^3 . I	93
§2. The embedding problem with non-Abelian kernel of order p^3 . II	99
§3. The Shafarevich lemma	103
§4. The Neukirch theorem	108
§5. The semidirect embedding problem with nilpotent kernel	118
§6. The inverse problem for solvable groups in Galois theory	134
Appendix	139
§1. Associative algebras	139
§2. Simple algebras	141
§3. The Tate duality	144
§4. The structure of factors of the decreasing p -central series of a free operator group	167
§5. The Frattini subgroup and its properties	170
§6. A duality theorem in cohomology of finite groups	171
Bibliography	175
Index	181
