

TABLE OF CONTENTS

Introduction	xi
Chapter I. The theory of multiplicative lattices	1
§1. Multiplicative lattices in n -dimensional complex space	1
§2. The existence of an infinite number of different irreducible maximal lattices for any given dimension $n > 1$ and any signature τ	13
§3. The geometry of Galois theory	19
§4. Multiplicative automorphisms (units) of lattices in K_n	27
§5. Ideals of a maximal lattice, the group of their classes, uniqueness of decomposition	36
§6. A basic figure consisting of the principal lattice O and $h - 1$ auxiliary lattices	46
§7. Quadratic forms of a lattice in K_n	52
§8. Factorable forms of a lattice in K_n	59
§9. Inverse lattices and factorable inverse forms	65
Supplement. Some useful lemmas on lattices in real euclidean space	73
Chapter II. Some calculations with numbers in cubic fields	82
§10. Cubic fields, Tschirnhausen transformations, integers in the field	82
§11. The operations of addition, subtraction, multiplication, division, raising to powers and taking roots of numbers in a cubic field, and the calculation of norms and discriminants	86
§12. A linear fractional representation of numbers in a cubic field	93
§13. The solution of the problem inverse to the Tschirnhausen problem for a pair of cubic equations	95
§14. A basis for integers in a field	97
§15. The connection between rings of integers in cubic fields containing 1 and classes of irreducible binary cubic forms with rational integer coefficients	101

§16. The solution of the problem of equivalence for two irreducible binary cubic forms with integer coefficients	107
§17. Calculation of a basis for a cubic field according to Voronoï	108
§18. The decomposition of rational primes into prime ideals in a cubic field	113
§19. The decomposition of rational primes into prime ideals in any maximal three-dimensional lattice	122
§20. A theorem on the discriminant of a field	123
§21. Further theorems on the decomposition of rational primes into prime ideals in a cubic field	125
§22. The determination of the group of classes of ideals in a cubic field	127
§23. Various forms connected with cubic fields	129
§24. The cyclic cubic field	132
§25. Purely cubic fields	136
Chapter III. Geometry, tabulation and classification of algebraic fields of the third and fourth degree	147
Part A. Tabulation of fields of the third degree	147
§26. The lattice \mathbb{W} and its nets $\bar{\mathbb{W}}_0, \bar{\mathbb{W}}_1$ for $n = 3, \tau = 0$ and 1	147
§27. The elimination of the reducible points in both cases	151
§28. Limits on the coefficients q and n for a given s for points close to the origin in rings of cubic integers, containing 1 whose discriminant does not exceed L in absolute value	153
§29. The determination of the third number in the basis of each of the captured points	156
§30. The plan of action for the discovery of all irreducible rings, composed of cubic integer points and containing the point 1 , whose discriminants do not exceed a given number in absolute value	157
§31. An independent tabulation of cubic cyclic maximal lattices	159
Part B. Some geometrical theorems	166
§32. Geometry of a binary cubic form and its covariants	166
§33. Reduction theory for binary cubic forms	173
§34. Binary cubic forms considered as norms	174
§35. Estimating the minima of binary cubic forms	176

§36. A theorem of Tartakovskii	181
Part C. Tabulation of fields of the fourth degree	184
§37. The lattice \bar{W} and its nets $\bar{W}_0, \bar{W}_1, \bar{W}_2$ for $n = 4, \tau = 0$	184
§38. The exclusion of reducible points	187
§39. Limiting the coefficients p, q, n	188
§40. The parallel projection of a quadratic subfield; limiting the coefficients α_1 and α_2	191
§41. The plan of action for obtaining all purely real quartic fields whose discriminants are less than L	197
Part D. The construction of cubic regions on quadratic regions	202
§42. Basing cubic regions on quadratic regions	202
§43. Some theorems on projections of cubic numbers	204
§44. Characteristics of a projection of a maximal cubic lattice	207
§45. The construction of maximal cubic lattices	212
§46. Some properties of the discriminants of cubic fields	217
Part E. The construction of a quartic region on a cubic region	220
§47. Basing a quartic region on a cubic region	220
§48. Some theorems about projections of fourth order numbers	222
§49. The solution of the problem inverse to the problem of Tschirnhausen for two quartic equations	225
§50. Properties of the projection of a maximal quartic lattice	226
§51. The construction of maximal quartic lattices on lattices L	228
§52. The structure of a quartic region and of the cubic region upon which it is based as determined by the Galois group	233
§53. Another method of construction of quartic regions with the groups \mathcal{G}, \mathcal{U} and \mathcal{V}	241
Chapter IV. The algorithm of Voronoï	246
Part A. The case $D > 0$	246
§54. Chains of relative minima	246
§55. A theorem on parallel chains	250
§56. Theorems on chains of different directions	254
§57. The solution of the problem of similarity of two lattices that are rationally associated with an irreducible maximal multiplicative lattice in $R_{3,0}$, or of lattices that are similar to such lattices	256

§58. The determination of the basic multiplicative automorphisms for a lattice rationally associated with an irreducible multiplicative lattice in $R_{3,0}$, or for a lattice similar to such a lattice	259
§59. An algorithm for the determination of the relative minimum adjacent to a given one for a lattice that is rationally associated with an irreducible lattice in $R_{3,0}$, or for one that is similar to such a lattice	262
Part B. The case $D < 0$	273
§60. A theorem of Voronoï on neighboring relative minima	273
§61. The algorithm of Voronoï in the case $n = 3$, $\tau = 1$ for the calculation of a chain of relative minima in the direction of increasing ρ , when the lattice is rationally connected with an irreducible multiplicative lattice in $R_{3,1}$ or is similar to such a lattice.....	282
§62. The solution of the problem of similarity of lattices rationally connected with the same irreducible cubic multiplicative lattice (i.e., with the same cubic field), or of lattices similar to such lattices	287
§63. The calculation of a basic multiplicative automorphism of a lattice rational with respect to an irreducible multiplicative lattice, or similar to such a lattice, when $n = 3$ and $\tau = 1$	287
§64. An algorithm for $D < 0$, based on the parallel transformation of a factorable form of a lattice and of a form polar to it.....	290
Chapter V. Thue's theorem	305
§65. The hyperbolas of Liouville and Thue	306
§66. Boundary sequences and the B -hyperbola	309
§67. Two lemmas of Thue	310
§68. The derivation of the existence of the B -hyperbola from the lemmas	315
§69. Investigations of V. A. Tartakovskii of the problem of finding bounds for the solutions by means of Thue's method	316
§70. An improvement on Siegel's theorem on the number of solutions of $ f(x, y) \leq k$, where $f(x, y)$ is a binary cubic form of positive discriminant	323
Chapter VI. On indeterminate equations of the third degree in two unknowns	343

Part A. Integer solutions	343
§71. The solution of the indeterminate equation $aX^3 + Y^3 = 1$	344
§72. The generalization of the method of §71 to the equation $I(X, Y) = 27$	351
§73. Further generalizations of the methods of §71	359
§74. The generalization of the method of §71 to the equation $x^4 - Ay^4 = \pm 1$	370
§75. On the number of solutions of the indeterminate equation $AX^3 +$ $BX^2Y + CXY^2 + EY^3 = \sigma$, where the form (A, B, C, E) is irre- ducible and is of negative discriminant	380
§76. Further investigations on the algorithm of ascent	402
§77. On integer cubic equations with a given discriminant	412
§78. The equation $U^3 - V^2 = k$	413
Part B. The solution of cubic indeterminate equations in two un- knowns in rationals	419
§79. On rational points on cubic curves	419
§80. Birational transformations	423
§81. Proof of Mordell's theorem given by Weil	427
§82. On the equation $x^3 + y^3 = Az^3$	435
Appendix	449
Supplement I. Introduction to Dirichlet's <i>Lectures on the theory of num- bers: The geometry of binary quadratic forms</i>	453
§1. Definitions and some general theorems about lattices	453
§2. Further theorems on lattices in a plane	459
§3. Theory of the distribution of the points of a lattice with respect to given asymptotes	465
§4. The theory of positive binary quadratic forms	476
§5. The theory of indefinite binary quadratic forms	480
Supplement II. Investigations in the geometry of Galois theory	491
§1. The theory of R -algebras	491
§2. The Galois group of an R -algebra	495
§3. Basic theorems of Galois for R -algebras	499
§4. The connection with the present-day presentation of Galois theory	500
Bibliography	504
