

CONTENTS

	Preface	v
CHAPTER I	PREREQUISITES	1
	1.1 Group Theory	1
	1.2 Permutations and Permutation Groups	7
	1.3 Fields	12
	1.4 Rings and Polynomials	14
	1.5 Some Elementary Theory of Equations	22
	1.6 Vector Spaces	29
CHAPTER II	FIELDS	33
	2.1 Degree of an Algebraic Extension	33
	2.2 Isomorphisms of Fields	39
	2.3 Automorphisms of Fields	50
	2.4 Fixed Fields	57
CHAPTER III	FUNDAMENTAL THEOREM	69
	3.1 Splitting Fields	69
	3.2 Normal Extensions and Groups of Automorphisms	76
	3.3 Conjugate Fields and Elements	88
	3.4 Fundamental Theorem	93

CHAPTER IV	APPLICATIONS	121
4.1	Solvability of Equations	121
4.2	Solvable Equations Have Solvable Groups	125
4.3	General Equation of Degree n	136
4.4	Roots of Unity and Cyclic Equations	139
4.5	How to Solve a Solvable Equation	157
4.6	Ruler-and-Compass Constructions	180
4.7	Lagrange's Theorem	196
4.8	Resolvent of a Polynomial	202
4.9	Calculation of the Galois Group	212
4.10	Matrix Solutions of Equations	219
4.11	Finite Fields	222
4.12	More Applications	233
	Bibliography	245
	Index	247
