

CONTENTS

Preface

vii

Chapter 1	Polynomial Identities in Algebras	1
1.	Varieties of Algebras	1
2.	T -Ideals, Polynomial Identities	4
3.	Special Types of Identities	9
4.	Equivalence and Specializations	18
5.	The Identities of Matrix Algebras	22
6.	A Theorem on Graphs	23
7.	The Standard Identity for Matrices	28
8.	Generalized Polynomial Identities	29
9.	Generalized versus Ordinary Polynomial Identities	31
Chapter 2	Structure Theorems	37
1.	Primitive PI -Algebras	37
2.	Prime Rings	38
3.	Structure of Semiprime Rings	41
4.	Consequences of the Structure Theorem	43
5.	The Structure of Prime Rings	45
6.	Extension Maps and Spectrum	51
7.	Irreducible Representations	55
8.	Nil Subalgebras	58
Chapter 3	The Identities of Matrix Algebras	61
1.	Rings of Generic Matrices	61
2.	Structure of T -Ideals	66
3.	Polynomial Identities of Endomorphism Rings	69

Chapter 4	Representations and Their Invariants	73
1.	Representations	73
2.	Invariants	83
3.	Relative versus Absolute Invariants	88
4.	Finite Generation of the Invariant Rings	92
5.	The Generic Splitting	93
6.	Some Special Cases	94
Chapter 5	Finitely Generated Algebras and Extensions	101
1.	Hilbert Nullstellensatz	101
2.	Chain Conditions	105
3.	Jacobson Rings and Hilbert Algebras	110
4.	Dimension Theory	114
5.	Krull Dimension Zero	117
Chapter 6	Finiteness Theorems	123
1.	Generalities	123
2.	Integral <i>PI</i> -Algebras over Noetherian Rings	124
3.	The General Case	136
4.	Some Classical Invariant Theory	143
5.	The Main Theorem for $B = Q$	147
	Addendum	151
Chapter 7	Intrinsic Characterization of Azumaya Algebras	155
1.	Localization	155
2.	Trace Formulas	160
3.	Characterization of Azumaya Algebras by Identities	162
Chapter 8	The Center of a <i>PI</i>-Ring	171
1.	The Center of a <i>PI</i> -Ring	171
2.	The Formanek Center	176
3.	Krull Dimension Revisited	178
	<i>Bibliography</i>	181
	<i>Open Problems</i>	185
	<i>List of Basic Notations</i>	187
	<i>Index</i>	189
