

P.M.COHN

Skew Fields of Fractions, and the Prime Spectrum of a General Ring

1. The Category of R-Fields	3
2. The Universal Σ -Inverting Ring	7
3. The Σ -Rational Closure of a Mapping	9
4. The Description of R-Fields by Localizing Sets	13
5. Sufficient Conditions for the Existence of Universal Fields of Fractions	20
6. Firs: A Class of Rings with a Universal Field of Fractions	27
7. Ideal Sets	33
8. The Prime Spectrum of a Ring	45
Appendix: All Primes are Good	55

VLASTIMIL DLAB and CLAUD MICHAEL RINGEL

Balanced Rings

I. Preliminaries	77
I.1. Notation and Terminology	77
I.2. Generators and Cogenerators	79
I.3. Uniserial Rings are Balanced	84
II. Local Rings	87
II.1. A Necessary Length Condition	87
II.2. Rings with $W^2 = 0$	90
II.3. Exceptional Rings	96
II.4. Exceptional Rings are Balanced	102
II.5. Structure of Local Balanced Rings	110
III. General Theorems	115
III.1. Morita Equivalence	115
III.2. Left Balanced Rings are Left Artinian	118
III.3. The Structure of Balanced Rings	124
III.4. Rings Finitely Generated over their Centres	127
III.5. The Module Category of a Balanced Ring	130
III.6. Centralizers of Indecomposable Modules	133
III.7. Existence of Exceptional Rings	138

CARL FAITH

Modules Finite over Endomorphism Ring

Abstract	146
Acknowledgements	148
Introduction	149
Annihilators	151
Modules Finite over Endomorphism Ring	155
Regular Rings	163
QI Rings	168
V-Rings	170
PF-Rings	181

L. FUCHS

The Cancellation Property for Modules

§1. Quasi-Injective Modules	193
§2. Projective Modules	195
§3. Further Necessary Conditions	198
§4. Equipollence of Pullbacks	200
§5. The Lifting Property	203
§6. Consequences of the Necessary Conditions	205
§7. Modules whose Endomorphisms are Monic	207
§8. Torsion-Free Modules of Rank 1	208
§9. Final Comments	210

ALFRED W. GOLDIE

The Structure of Noetherian Rings

1. Semi-Prime Rings	214
Quotient Rings	228
Semi-Prime Rings	232
2. The Quotient Problem	239
Non-Commutative Local Rings	248
3. The Structure of Orders	284
Dedekind Prime Rings	308

Quasisimple Modules and other Topics in Ring Theory 323

G. O. MICHLER

Blocks and Centers of Group Algebras

Introduction 430
0. Notation 435
§1. Block Ideals 437
§2. Linear Characters 444
§3. Defect Groups 447
§4. First Main Theorem on Blocks 453
§5. Osima's Theorem 465
§6. Blocks and Normal Subgroups 469
§7. Blocks with Normal Defect Groups 485
§8. Brauer's Main Theorem on Blocks with Normal Defect Groups 490
§9. Conjugacy Classes and Blocks 499
§10. Conjugacy Classes and Simple Modules 513
§11. Frobenius Reciprocity Theorem and Clifford's Theorem . . 517
§12. The Blocks of a p -Nilpotent Group 525
§13. Group Algebras with Central Radicals 552

R. S. PIERCE

Closure Spaces with Applications to Ring Theory

1. Introduction 566
2. Closure Operators 570
3. Closure Spaces 576
4. Additive Morphisms 580
5. Bounded Morphisms 584
6. Inductive Families 592
7. Applications to Modules 600
8. An Application to Projective Dimension 606

HANS H. STORRER

On Goldman's Primary Decomposition

1. Rational Extensions of Modules 621
2. Atoms 627

3. The Primary Decomposition	637
4. A Characterization of Certain Artinian Rings	645
5. Goldman's Theory	647
6. The Tertiary Decomposition	651
7. Compressible and Quasi-Simple Modules	654
