CONTENT

Chapter I: Preliminaries on rings and modules

1 Modules and homomorphisms I 1

2 Exact sequences I 9

3 Tensor products I 21

4 Artinian and noetherian modules I 29

5 Integers I 39

6 Localization I 42

7 Dedekind domains I 45

8 Localizations of Dedekind domains I 50

9 Completions of Dedekind domains I 55

Chapter II: Homological algebra

1 Categories and functors II 1

2 Homology II 17

3 Derived functors II 31

4 Homological dimension II 45

5 Description of $\mathrm{Ext}^1_R(M,N)$ in terms of exact sequences II 49

Chapter III: The Morita theorems and separable algebras

1 Projective modules and generators III 1

2 Morita-equivalences III 9

3 Norm and trace III 14

4 The enveloping algebra III 20

5 Separable algebras III 27

6 Splitting fields III 35

7 Projective covers III 50

Chapter IV: Maximal orders

1 Lattices and orders IV 1

2 The method of lifting idempotents IV 10

3 Projective lattices and progenerators over orders IV 13

4 Maximal orders IV 22

5 Maximal orders and progenerators IV 33

6 Maximal orders in skewfields over complete fields IV 41

Chapter V: The Higman ideal and extensions of lattices

1 Different and inverse different V 1

2 Projective homomorphisms V 6

3 The Higman ideal of an order V 11

4 Extensions of lattices V 17

5 Annihilators for some special classes of lattices V 25
