Suggestions for Reading this Book	XXI
Special Symbols	XXIII
Introduction to Volume I	1
Foreword on Set Theory	2

Part I

Introduction to the Operations: Monoid, Semigroup, Group, Category, Ring, and Module

1. Operations: Monoid, Semigroup, Group, and Category	43
2. Product and Coproduct	83
3. Ring and Module	110
4. Correspondence Theorems for Projective Modules and the Structure of Simple Noetherian Rings.	185
5. Limits, Adjoints, and Algebras	230
6. Abelian Categories	300

Part II

Structure of Noetherian Semiprime Rings

7. General Wedderburn Theorems	325
8. Semisimple Modules and Homological Dimension	365
9. Noetherian Semiprime Rings	388
10. Orders in Semilocal Matrix Rings	401

Part III

Tensor Algebra

11. Tensor Products and Flat Modules.	419
12. Morita Theorems and the Picard Group	443
13. Algebras over Fields	460

Part IV

Structure of Abelian Categories

14. Grothendieck Categories	486
15. Quotient Categories and Localizing Functors	498
16. Torsion Theories, Radicals, and Idempotent, Topologizing, and Multiplicative Sets	519
Bibliography	538
Index	551

Contents of Volume II:

Part V. Nonsemisimple Rings

Part VI. Commutative, Hereditary Rings, Separable Algebras, and the
Brauer Group

Bibliography
