<i>Preface</i>	<i>page</i> xi
<i>Some notes for the reader</i>	xiii
<b>1. Introduction to some basic ideas</b>	
1.1 General remarks concerning rings	1
1.2 Modules	2
1.3 Homomorphisms and isomorphisms	3
1.4 Submodules	7
1.5 Factor modules	12
1.6 Isomorphism theorems	15
1.7 Composition series	17
1.8 The maximal and minimal conditions	21
1.9 Direct sums	31
1.10 The ring of endomorphisms	38
1.11 Simple and semi-simple rings	47
1.12 Exact sequences and commutative diagrams	55
1.13 Free modules	59
1.14 Change of ring	63
<i>Exercises on Chapter 1</i>	67
<b>2. Prime ideals and primary submodules</b>	
2.1 Zorn's Lemma	70
2.2 Prime ideals and integral domains	73
2.3 Minimal prime ideals	78
2.4 Subrings and extension rings	85
2.5 Integral extensions	86

## CONTENTS

2.6	Prime ideals and integral dependence	page 90
2.7	Further operations with ideals and modules	93
2.8	Primary submodules	97
2.9	Submodules which possess a primary decomposition	102
2.10	Existence of primary decompositions	110
2.11	Graded rings and modules	112
2.12	Torsionless grading monoids	118
2.13	Homogeneous primary decompositions	123
	<i>Exercises on Chapter 2</i>	127

### 3. Rings and modules of fractions

3.1	Formation of fractions	129
3.2	Rings of fractions	134
3.3	The full ring of fractions	139
3.4	Functors	141
3.5	Further properties of fraction functors	149
3.6	Fractions and prime ideals	157
3.7	Primary submodules and fractions	159
3.8	Localization	162
3.9	Some uses of localization	166
	<i>Exercises on Chapter 3</i>	173

### 4. Noetherian rings and modules

4.1	Further consideration of the maximal and minimal conditions	175
4.2	Noetherian modules and Artin rings	180
4.3	Noetherian graded modules	190
4.4	Submodules of a Noetherian module	192
4.5	Lengths and primary submodules	199

4.6	The Intersection Theorem	<i>page</i> 206
4.7	The Artin–Rees Lemma	208
4.8	Rank and dimension	214
4.9	Local and semi-local rings	222
	<i>Exercises on Chapter 4</i>	231
<b>5.</b>	<b>The theory of grade</b>	
5.1	The concept of grade	235
5.2	The theory of grade for semi-local rings	248
5.3	Semi-regular rings	256
5.4	General properties of polynomial rings	261
5.5	Semi-regular polynomial rings	271
	<i>Exercises on Chapter 5</i>	272
<b>6.</b>	<b>Hilbert rings and the Zeros Theorem</b>	
6.1.	Hilbert rings	274
6.2	Polynomials with coefficients in a field	281
6.3	The Zeros Theorem	284
	<i>Exercises on Chapter 6</i>	288
<b>7.</b>	<b>Multiplicity theory</b>	
7.1	Preliminary considerations	289
7.2	Key theorems on central ideals	292
7.3	Multiplicity systems	295
7.4	The multiplicity symbol	299
7.5	The limit formula of Lech	314
7.6	Hilbert functions	316
7.7	The limit formula of Samuel	325
7.8	Localization and extension	331

## CONTENTS

7.9	The associative law for multiplicities	<i>page</i> 338
7.10	Further consideration of Hilbert functions	343
	<i>Exercises on Chapter 7</i>	349
<b>8. The Koszul complex</b>		
8.1	Complexes	351
8.2	Construction of the Koszul complex	358
8.3	Properties of the Koszul complex	360
8.4	Connections with multiplicity theory	369
8.5	Connections with the theory of grade	371
	<i>Exercises on Chapter 8</i>	374
<b>9. Filtered rings and modules</b>		
9.1	Topological prerequisites	377
9.2	Filtered modules	379
9.3	Continuous, compatible and strict homomorphisms	382
9.4	Complete filtered modules	385
9.5	The completion of a filtered module	389
9.6	The existence of completions	399
9.7	Filtered rings	400
9.8	Filtered modules over filtered rings	404
9.9	Multiplicative filtrations	407
9.10	$I$ -adic filtrations	418
9.11	$I$ -adic completions of commutative Noetherian rings	428
	<i>Exercises on Chapter 9</i>	439
	<i>Index</i>	441
