Preface v

CHAPTER 1 RINGS AND IDEALS

§1 Internal laws of composition	1
§2 Semigroups, groups and rings	7
§3 Subrings and ideals	14
§4 Homomorphisms of rings	23
§5 Extensions of rings	29

CHAPTER 2 MODULES

§6 Modules, submodules and factor modules	36
§7 Homomorphisms of modules	45
§8 Groups of homomorphisms	50
§9 Direct products and sums	59
§10 Direct and inverse limits	68
§11 Free, projective and injective modules	76
§12 Tensor products	91
§13 Composition series	105
§14 Artinian and Noetherian modules and rings	112

CHAPTER 3 CATEGORIES

§15 Categories	121
§16 Abelian categories	132
§17 Functors	145
§18 Relations in an abelian category	151

CHAPTER 4 STRUCTURE OF RINGS

§19 Simple modules	162
§20 Semisimple modules	164
§21 Centralisers and bicentralisers of modules	172
§22 Semisimple and simple rings	176
§23 The radical of a ring	190

CHAPTER 5
ALGEBRAS

§24	Tensor products of algebras	201
§25	Simple algebras	212
§26	Splitting fields of simple algebras	223
§27	Separable algebras	233

CHAPTER 6
HOMOLOGY

§28	Complexes and homology	241
§29	Resolutions and coresolutions	254
§30	Derived functors	265
§31	Cohomology of algebras	279
§32	Algebras of dimension zero	287
§33	Extensions of algebras	297

Reading list	303
Index	305
