

Chapter I. Quadratic forms over rings	1
§1. Definitions	1
§2. Operations with quadratic and bilinear forms	5
§3. Subspaces	9
§4. Hyperbolic spaces	15
Chapter II. Invariants of quadratic forms	22
§1. Azumaya algebras	22
§2. Clifford algebras	30
§3. The structure of Clifford algebras	36
§4. Some computations	54
§5. Quadratic spaces of lower dimension	56
Chapter III. The orthogonal group	59
§1. Notations	59
§2. The Eichler decomposition of the orthogonal group	61
§3. Proper automorphisms	64
§4. Witt's cancellation theorem over semi local rings	79
§5. Transversality theorems for quadratic forms	83
Chapter IV. Pfister spaces over semi local rings	89
§1. Similarities	89
§2. Pfister spaces	94
§3. Isotropic Pfister spaces	105
§4. Further results on quadratic Pfister spaces	107
Chapter V. Structure of Witt rings	112
§1. Introduction	112
§2. The discriminant map	114
§3. Some computations	117
§4. Quadratic separable extensions	121
§5. An exact sequence of Witt groups	134
§6. The torsion of $W_q(A)$ and $W(A)$	143
§7. The local global principle of Pfister	146
§8. Nilpotent elements in $W_q(A)$ and $W(A)$	156
§9. An explicite description of $W_q(A)_t$	160
§10. On the classification of quadratic spaces	167
§11. The behaviour of $W_q(A)$ by Galois extensions	173

Appendix A. On the level of semi local rings	177
Appendix B. The u-invariant	187
