

CONTENTS

Preface	iii
List of Contributors	vii
Participants	ix
EXISTENCE THEOREMS FOR ALMOST SPLIT SEQUENCES	1
Maurice Auslander	
§1. Introduction	1
§2. Basic Existence Theorem	2
§3. Criteria for Almost Split Sequences	10
§4. Some Applications	17
§5. Lattices and Orders	20
§6. Examples	36
References	44
NONCOMMUTATIVE PURELY INSEPARABLE EXTENSIONS	45
Moss Swee3dler	
§1. Introduction	45
§2. Definition of Purely Inseparable Extension	46
§3. Results about Purely Inseparable Algebras	48
§4. Results about Purely Inseparable Extensions	50
References	54

Moss Swee3dler

§1. Introduction	55
§2. Functorial Twistule Theory	56
§3. Applications	60
§4. Faithfully Flat Descent	61
§5. Faithful Descent, Lie Descent and Co-algebra Descent	61
§6. Faithful Descent and Commutative Morita Descent	63
References	67

BRAUER GROUPS 69

Daniel Zelinsky

§1. Introduction	69
§2. Classical Brauer Groups	69
§3. Cohomological Description of the Brauer Group	75
§4. Brauer Groups of Rings	82
§5. More Cohomology	88
References	98

THE STRUCTURE OF THE UNIT GROUP OF GROUP RINGS 103

R. Keith Dennis

§1. Introduction	103
§2. One-sided Units	105
§3. Group Properties	105
§4. Isomorphisms	106
§5. Splittings	106

§6. Normal Subgroups	109
§7. Trivial Units	110
§8. Units of Finite Order	113
§9. Integral Group Rings	115
§10. A Problem of Rothaus	120
§11. Miscellaneous	121
References	122
POWER-CANCELLATION OF MODULES	131
K. R. Goodearl	
§1. Introduction	131
§2. Stable Range and Cancellation	131
§3. Power-substitution and Power-cancellation	136
§4. Applications	143
§5. Problems	145
References	147
DIAGRAMMATIC TECHNIQUES IN THE STUDY OF INDECOMPOSABLE MODULES	149
Edward L. Green	
§1. Introduction	149
§2. k -species and Quivers	150
§3. The Classification Theorems	151
§4. k -species and Tensor Algebras	155
§5. k -species and Radical Square Zero k -algebras	157
§6. Further Applications	159
§7. Theorems on Amalgamations	159

§8. Construction of Indecomposable Modules in Artin Rings	162
§9. Classification of Modules with Cores	163
§10. Another Classification Theorem	166
References	167
COHEN-MACAULAY RINGS, COMBINATORICS, AND SIMPLICIAL COMPLEXES	171
Melvin Hochster	
§1. Introduction	171
§2. Reisner's Results: Cohen-Macaulayness of $K[\Delta]$	173
§3. Depth, C-M Rings, Projective Resolutions, Local Cohomology, and Gorenstein Rings	182
§4. R. Stanley's Results on the Upper Bound Conjecture	192
§5. The Betti Numbers of $K[\Delta]$	193
§6. Pic and Sheaf Cohomology on $\text{Proj}(K[\Delta])$, the Gorenstein Property for $K[\Delta]$, and Poincaré Duality on $ \Delta $	202
§7. The Cohen-Macaulay Property for Ideals Generated by Monomials which may Involve Higher Powers	217
References	221
EXAMPLES OF ARTINIAN, NON-NOETHERIAN RINGS	225
Lawrence S. Levy	
§1. Introduction	225
§2. Reduction of A not N to A and N	227
§3. Examples	230
References	236

THE CROSSED-PRODUCT PROBLEM	237
Murray Schacher	
§1. Introduction	237
§2. The Amitsur Counter-example	238
§3. Noncrossed-Products	240
References	245
GROWTH OF ALGEBRAS	247
Martha K. Smith	
§1. Introduction	247
§2. Examples	248
§3. A Necessary Condition	252
§4. Questions	253
§5. Related Questions	255
References	257
THE ZERO DIVISOR CONJECTURE	261
Robert L. Snider	
§1. Introduction	261
§2. Polycyclic-by-Finite	262
§3. Concluding Remarks	264
References	265

PRIME IDEAL STRUCTURE IN NOETHERIAN RINGS

267

Roger Wiegand

§1. Introduction	267
§2. The Spectrum of an Arbitrary Commutative Ring	268
§3. The Principal Ideal Theorem	270
§4. Saturated Chains	274
§5. Appendix: The Maximal Spectrum	277
References	279

DENSE RINGS OF LINEAR TRANSFORMATIONS

281

J. M. Zelmanowitz

§1. Introduction	281
§2. Prime Nonsingular Rings	283
§3. The Semiprime Case	284
§4. Rings with Critically Compressible Modules	286
§5. The Weak Radical, Some Questions	292
References	294
