Preface	iii
Contributors	xi
Participants	xiii
THE THEORY OF ORDERED FIELDS	1
T. Y. Lam	
§1. Introduction	1
§2. Orderings and Examples	7
§3. The Artin-Schreier Theory	16
§4. Preorderings	29
§5. Orderings and Real Valuations	33
§6. Real Function Fields	49
§7. Hilbert's 17th Problem and Real Commutative Algebra	58
§8. Orderings and Quadratic Forms	71
§9. Extension of Orderings	79
§10. Some Special Fields	89
§11. Special Preorderings	109
§12. Orderings of Higher Level	124
References	138
STRONG APPROXIMATION AND LOCALLY FREE MODULES	153
Richard G. Swan	
§1. Introduction	153
§2. Projective Modules	154
§3. K-Theory	157
§4. Cartesian Squares	158
§5. Mayer-Vietoris Sequences	163
§6. Applications	166
§7. Reduced Norms	171
§8. Strong Approximation	173

§9. Applications to Wall Squares	177
§10. Applications to Milnor Squares	181
§11. Quaternion 2-Groups	186
§12. The Norm Theorems	191
§13. Strong Approximation, Preliminaries	199
§14. Proof of Strong Approximation	203
§15. Eichler's Norm Theorem	206
§16. Drozd's Condition	214
References	220

## A SURVEY OF THE ISOMORPHISM THEORY OF THE CLASSICAL GROUPS 225

O. T. O'Meara

§1. Introduction	225
§2. The Classical Groups	225
§3. The Isomorphism Theory	228
§4. The Method of Involutions	229
§5. The Method of Residual Spaces	233
§6. The Noncommutative Case	238
§7. Conclusion	241
References	241

## INTRODUCTION TO ALGEBRAS WITH STRAIGHTENING LAWS 243

David Eisenbud

§1. Introduction	243
§2. Definitions and Examples	245
§3. Some Results on ASL's	257
§4. Cohen-Macaulay Algebras and Wonderful Posets	263
References	267

AN OVERVIEW OF INTEGRAL REPRESENTATION THEORY	269
Irving Reiner	
§1. Introduction	269
§2. Jordan-Zassenhaus Theorem	270
§3. P-adic Theory	271
§4. Finite Representation Type	274
§5. Projective RG-lattices	275
§6. Genus, Ideles, and Class Groups	277
§7. Jacobinski's Cancellation Theorem	284
§8. K-theory and Grothendieck Groups	287
§9. Picard Groups	293
§10. Specific Groups	295
§11. Directions for Future Research	296
References	298
PRIME MODULES AND ONE-SIDED IDEALS	301
John Dauns	
§1. Introduction	301
§2. Applications of One-Sided Prime Ideals to the Structure of Rings	302
§3. General Theory of Prime Submodules	310
§4. Strict Prime Submodules	319
§5. Localization at Prime Submodules	328
§6. One-sided Prime Ideals and Semigroups	333
§7. Examples	338
References	342
BRAUER GROUPS OF FIELDS	345
Burton Fein and Murray Schacher	
§1. Introduction	345
§2. Some Classical Examples	349
§3. Brauer Groups of Function Fields	351

§4. Divisible Groups	353
§5. Concluding Remarks	354
References	355

## FINITE GROUP ACTIONS ON NONCOMMUTATIVE RINGS:

A SURVEY SINCE 1970 357

Joe W. Fisher and James Osterburg

§1. Introduction	357
§2. Bergman and Isaac's Theorem	360
§3. Existence of Fixed Points	362
§4. Classical Quotient Rings	363
§5. Identities	365
§6. Prime and Primitive Ideal Structures	367
§7. $G$ -Invariant Ideals	369
§8. Projectivity and Injectivity	370
§9. $X$ -Outer Automorphisms	372
§10. When is $R$ finitely generated over $R^G$	376
§11. $X$ -Inner Automorphisms	379
§12. Direct Sums of Simple Rings	381
§13. $M$ -Groups	382
§14. The Algebra of the Group	386
References	387

STRUCTURE SHEAVES OF NONCOMMUTATIVE RINGS 395

Jonathan S. Golan

§1. Introduction	395
§2. Localizing Rings	396
§3. Candidates for the Spectrum	399
§4. Presheaves of Rings	402
§5. The Structure Sheaf of a Noncommutative Ring	403
References	404

REPRESENTATION THEORY OF POLYCYCLIC GROUPS	407
Robert L. Snider	
§1. Introduction	407
§2. Noetherian Group Rings	408
§3. Orbitally Sound Groups	408
§4. Simple Modules	410
§5. Primitive Group Algebras	412
References	413
AN APPLICATION OF ALGEBRAIC GEOMETRY TO EXTREMAL SET THEORY	415
Richard P. Stanley	
§1. Introduction	415
§2. Some Algebraic Geometry	417
§3. Applications	418
References	421
