PREFACE	xiii
PREREQUISITES	xix

CHAPTER 1

The Structure of PI-Rings

1.1.	Basic Concepts and Examples	2
	<i>The Free Monoid $\mathcal{M}(X)$</i>	2
	<i>The Free Algebra $\phi\{X\}$</i>	3
	<i>Identities</i>	4
	<i>Multilinearization</i>	6
	<i>Normal Polynomials</i>	7
	<i>Examples of PI-Rings</i>	9
1.2.	Facts about Normal Polynomials	11
	<i>Capelli Polynomials and Standard Polynomials</i>	12
1.3.	Matrix Algebras	14
	<i>Matrices and Algebras of Endomorphisms</i>	14
	<i>The Trace</i>	15
	<i>The Algebra $\phi_n\{Y\}$ of Generic Matrices</i>	15
	<i>Modifying the Algebra of Generic Matrices</i>	16
	<i>The General Cayley–Hamilton Theorem and Newton’s Formulas</i>	18
	<i>The Regular Representation</i>	19
	<i>Nilpotent Subsets</i>	19
1.4.	Identities and Central Polynomials for Matrix Algebras, and Their Applications to Arbitrary PI-Algebras	20
	<i>The Amitsur–Levitzki Theorems</i>	21
	<i>The Role of the Capelli Polynomial</i>	23
	<i>Central Polynomials, Featuring g_n</i>	24
	<i>Properties of n^2-Normal, Central Polynomials of Arbitrary Rings</i>	27
	<i>Linear Dependence through the Capelli Polynomial</i>	31
1.5.	Primitive Rings, Kaplansky’s Theorem, and Semiprimitive Rings	31
	<i>Density</i>	32
	<i>Minimal Left Ideals</i>	34
	<i>The Closure (or Splitting) of a Primitive Ring</i>	35
	<i>Kaplansky’s Theorem: Two Proofs and Applications to Simple Algebras</i>	35
	<i>Primitive Ideals and the Jacobson Radical</i>	38
	<i>Semiprimitive Algebras</i>	39

1.6.	Injections of Algebras, Featuring Various Nil Radicals	40
	<i>Admissible Algebras and the Injection Problem</i>	41
	<i>PI-Rings with Nilradical 0</i>	43
	<i>The Sum of Nil Left Ideals of Bounded Degree ($N(R)$)</i>	45
	<i>Semiprime PI-Rings</i>	46
	<i>Nil Subsets of PI-Rings</i>	47
	<i>Amitsur's Method of Obtaining Canonical Identities</i>	48
1.7.	Central Localization of PI-Algebras	51
	<i>The Algebra of Central Quotients</i>	52
	<i>Localizing at a Set Intersecting $g_n(R)R$ Nontrivially</i>	53
	<i>Semiprime PI-Rings</i>	54
1.8.	Tensor Products and the Artin–Procesi Theorem	59
	<i>Tensor Products of Modules</i>	59
	<i>Tensor Products of Algebras</i>	60
	<i>Examples of Tensor Products</i>	62
	<i>Tensor Products over a Field</i>	63
	<i>The Artin–Procesi Theorem—“Difficult Direction”</i>	65
	<i>Proper Maximally Central Algebras</i>	68
	<i>A Strengthened Artin–Procesi Theorem and Its Applications</i>	69
	<i>The Tensor Product Question: An Introduction</i>	71
	<i>The Brauer Group</i>	72
1.9.	The Prime Spectrum	72
	<i>Comparing Prime Ideals of Related Rings</i>	73
	<i>Ranks of Prime Ideals</i>	74
	<i>$\text{Spec}_n(R)$</i>	75
	<i>Prime Ideals Minimal over $g_n(R)$</i>	77
	<i>Integral Extensions of Commutative Rings</i>	78
1.10.	Valuation Rings, Idempotent Lifting, and Their Applications	80
	<i>Valuation Rings</i>	80
	<i>The Transcendence Degree, and Its Application to Rank</i>	82
	<i>Ranks of Affine PI-Rings</i>	84
	<i>Affine Rings of Generic Matrices</i>	86
	<i>Lifting Idempotents</i>	87
	<i>The A-adic Completion</i>	89
	<i>The Completion of a Valuation Ring</i>	90
	<i>Valuation Rings and the Integral Closure</i>	91
	<i>Algebras over Valuation Rings</i>	92
	<i>The “Little” Bergman–Small Theorem</i>	95
	<i>The “Big” Bergman–Small Theorem</i>	96
1.11.	Identities of Rings without 1	100
	Exercises	103

CHAPTER 2

The General Theory of Identities, and Related Theories

2.1.	Basic Concepts	109
	<i>Generalized Identities</i>	111
	<i>Identities and Generalized Identities of Rings with Involution</i>	114

	<i>Special Rings with Involution</i>	117
	<i>Generalized Monomials</i>	117
	<i>Degree and Related Concepts</i>	119
2.2.	PI-Rings Which Have an Involution	119
2.3.	Sets of Identities of Related Rings (with Involution)	123
	<i>Stability of Identities</i>	125
	<i>The Vandermonde Argument and Its Applications</i>	129
2.4.	Relatively Free PI-Rings and T -Ideals	133
	<i>Building T-Ideals</i>	133
	<i>The Jacobson Radical of a Relatively Free PI-Ring Is Nil</i>	134
	<i>Relatively Free PI-Rings of Prime and Semiprime Rings</i>	135
	<i>Relatively Free Prime Rings with Involution</i>	136
	<i>Specht's Conjecture and Related Considerations</i>	137
	<i>Introduction to Trace Identities</i>	139
2.5.	Identities of Matrix Rings with Involution	140
	<i>Minimal Polynomials of Symmetric and Antisymmetric Matrices</i>	141
	<i>Some Identities of $(M_n(C), t)$ and $(M_n(C), s)$</i>	143
	<i>Minimal Identities</i>	144
2.6.	Elementary Sentences of Algebraic Systems	145
	Exercises	148

CHAPTER 3

Central Simple Algebras

3.1.	Fundamental Results	151
	<i>The Skolem–Noether Theorem and Wedderburn's Theorem</i>	152
	<i>Splitting Fields</i>	153
	<i>The Index of a Simple PI-Ring</i>	155
	<i>Crossed Products</i>	157
	<i>Exponents of Central Simple Algebras</i>	163
	<i>Cyclic Algebras</i>	164
	<i>The Reduced Trace</i>	166
	<i>Involutions of Central Simple Algebras</i>	167
	<i>Involutions and Maximal Subfields</i>	171
	<i>Characterization of Involutions of the First Kind</i>	173
3.2.	Positive General Results about Maximal Subfields of Division Rings	174
	<i>The Generic Division Rings</i>	175
	<i>Wedderburn's Method</i>	178
	<i>The Cases $n=3$ and $n=4$</i>	180
	<i>Generic Matrix Rings with Involution</i>	183
	<i>Simple PI-Rings with Involution of First Kind</i>	185
3.3.	The Generic Division Rings	187
	<i>Skew Polynomial Rings and Their Rings of Central Quotients</i>	187
	<i>Noncrossed Product Theorems</i>	191
	<i>Division Algebras over Fields Having a Complete, Discrete Valuation</i>	191
	<i>More Noncrossed Product Theorems</i>	196
	<i>The Center of the Ring of Generic Matrices</i>	196
	Exercises	198

CHAPTER 4

Extensions of PI-Rings

4.1.	Integral and Algebraic Extensions of PI-Rings	202
	<i>Integral PI-Extensions</i>	203
4.2.	Formal Words and Shirshov's Solution to the Kurosch Problem	204
4.3.	The Characteristic Closure of a Prime PI-Ring	208
4.4.	Finitely Generated PI-Extensions	210
	<i>Hilbert's Nullstellensatz Generalized, and Related Results</i>	210
	<i>ACC (Ideals) and Related Notions</i>	212
	<i>Nilpotence of the Jacobson Radical</i>	214
	<i>A Small Counterexample</i>	215
	<i>Going Down</i>	216
	<i>Affine PI-Rings Are Catenary</i>	217
4.5.	Generalizing the Razmyslov–Schelter Construction	218
	Exercises	220

CHAPTER 5

Noetherian PI-Rings

5.1.	Sufficient Conditions for a PI-Ring to Be Noetherian	224
	<i>Formanek's Theorem</i>	224
	<i>Cauchon's Theorem</i>	225
	<i>The Eakin–Formanek Theorem</i>	226
	<i>Noetherian Counterexamples</i>	228
5.2.	The Theory of Noetherian PI-Rings	229
	<i>The Principal Ideal Theorem</i>	229
	<i>Rank of Prime Ideals</i>	232
	<i>The Intersection of Powers of the Jacobson Radical</i>	233
	<i>Intersection of Powers of Ideals</i>	236
	Exercises	237

CHAPTER 6

The Theory of the Free Ring, Applied to Polynomial Identities

6.1.	The Solution of the Tensor Product Question	239
	<i>Relation of Codimensions to Specht's Problem</i>	242
6.2.	Representations of $\text{Sym}(n)$	243
	<i>Obtaining Polynomial Identities from Young Diagrams</i>	246
6.3.	Finite Generation of Certain T -Ideals	248
	<i>Higman's Theorem</i>	249
	<i>Application of the Combinatoric Method to Polynomials</i>	250
	Exercises	252

CHAPTER 7

The Theory of Generalized Identities

7.1.	Semiprime Rings with Socle	254
7.2.	The Basic Theorem of Generalized Polynomials and Its Consequences	257
	<i>Amitzur's Theorem</i>	261
	<i>Improper Generalized Identities</i>	261
	<i>Strong GIs</i>	263
	<i>The Modified Density Theorem and Its Consequences</i>	264
7.3.	Primitive Rings with Involution	265
	<i>A(*)-Analogue of the Density Theorem</i>	266
	<i>Matrix Algebras with Involution</i>	270
7.4.	Identities and Generalized Identities of Rings with Involution	271
7.5.	Ultraproducts and Their Application to GI-Theory	276
	<i>Injecting Prime [and (*)-Prime] Rings into Nicer Rings</i>	279
7.6.	Martindale's Central Closure	282
	Exercises	286

CHAPTER 8

Rational Identities, Generalized Rational Identities, and Their Applications

8.1.	Definitions and Examples	289
8.2.	Generalized Rational Identities of Division Rings	291
	<i>Principal Left Ideal Domains and the Ore Condition</i>	292
	<i>The Division Ring Structure \bar{D} on $D(\lambda)$</i>	293
	<i>Identifying \bar{D} with the Division Ring of Laurent Series over D</i>	294
	<i>Lifting Generalized Rationalized Identities</i>	295
	<i>A Change of Division Rings</i>	296
	<i>The First Fundamental Theorem</i>	296
	<i>The "Generic" Division Ring $W_D(X)$</i>	297
8.3.	Rational Identities of Division Rings of Finite Degree	299
	<i>Rational Equivalence of Simple Algebras of the Same Degree</i>	299
	<i>The Second Fundamental Theorem</i>	301
8.4.	Applications of the Theory of Rational Identities	302
	<i>Group Identities</i>	302
	<i>Desarguan Geometry</i>	304
	<i>Intersection Theorems</i>	306
	Exercises	312

APPENDIX A

Central Polynomials of Formanek

		315
Exercises		319

APPENDIX B

The Theory of $\forall\exists$ Elementary Conditions on Rings

		320
Exercises		326

APPENDIX C

Nonassociative PI-Theory 327

<i>NPI-Rings</i>	328
<i>Kaplansky Classes of Algebras</i>	331
<i>Application: Alternative Rings</i>	332
Exercises	338

POSTSCRIPT

Some Aspects of the History 339

BIBLIOGRAPHY	341
MAJOR THEOREMS CONCERNING IDENTITIES	355
MAJOR COUNTEREXAMPLES	358
LIST OF PRINCIPAL NOTATION	359
INDEX	361
