Preface xi

Introduction xiii

Notation and terminology xvii

Part I. Setting the scene

- Chapter 1. Torsion theories defined 3
- Chapter 2. The lattice of torsion theories 11

Part II. Classes of modules associated with torsion theories

- Chapter 3. Torsion modules 19
- Chapter 4. Dense submodules 29
- Chapter 5. Torsionfree modules 44
- Chapter 6. Pure submodules 53
- Chapter 7. Cotorsionfree modules 63
- Chapter 8. Relatively injective modules 77
- Chapter 9. Relatively neat submodules 91
- Chapter 10. Absolutely pure modules 99
- Chapter 11. Relatively projective modules 108
- Chapter 12. Relatively divisible modules 119
- Chapter 13. Relatively codivisible modules 123
- Chapter 14. Relatively simple and cocritical modules 132
- Chapter 15. Relatively full modules 147
- Chapter 16. Semicocritical modules 151
- Chapter 17. Relatively finitely generated modules 157
- Chapter 18. Relatively cofinitely generated modules 161
- Chapter 19. Relatively finitely presented modules 164
- Chapter 20. Relatively noetherian modules 175
- Chapter 21. Relatively artinian modules 190
- Chapter 22. Modules with a relative composition series 201

Part III. Functors defined by torsion theories

- Chapter 23. The torsion radical functor 213
- Chapter 24. The relative Jacobson radical 221
- Chapter 25. The relative socle 235
- Chapter 26. The localization functor 242
- Chapter 27. The prelocalization functor 265
- Chapter 28. The colocalization functor 271

Part IV. The lattice R-tors

- Chapter 29. R-tors as a frame 277
- Chapter 30. Regular torsion theories 288
- Chapter 31. Decisive modules 300
- Chapter 32. Irreducible torsion theories 305
- Chapter 33. Prime torsion theories 309
- Chapter 34. Semiprime torsion theories 320
- Chapter 35. Coatoms of R-tors 329

Part V. Torsion theories of special types

- Chapter 36. Semisimple torsion theories 337
- Chapter 37. Symmetric torsion theories 344
- Chapter 38. Stable jansian torsion theories 352
- Chapter 39. Centrally splitting torsion theories 364
- Chapter 40. Direct decomposition of torsion theories 373
- Chapter 41. Noetherian torsion theories 384
- Chapter 42. Torsion theories of finite type 393
- Chapter 43. Principal torsion theories 406
- Chapter 44. Exact torsion theories 410
- Chapter 45. Perfect torsion theories 416

Part VI. Change of rings

- Chapter 46. Action of ring homomorphisms 433
- Chapter 47. Torsion theories compatible with ring homomorphisms 439
- Chapter 48. Perfect ring epimorphisms 450
- Chapter 49. Torsion theories and Morita contexts 465

Part VII. Rings characterized by torsion theories

- Chapter 50. Left stable rings 477
- Chapter 51. Left seminoetherian rings 486
- Chapter 52. Left semiartinian rings 491
- Chapter 53. Left convenient rings 503

Part VIII. Decomposition and dimension of modules

- Chapter 54. The support of a module 513
- Chapter 55. The assassin of a module 519
- Chapter 56. Definite rings and modules 529
- Chapter 57. The dimension of a definite cotorsionfree module 543
- Chapter 58. Primary decomposition of modules 551
- Chapter 59. Prime torsion theories and prime ideals 557

Part IX. Relative local cohomology

- Chapter 60. Derived functors of the torsion functor 575
- Chapter 61. Cousin complexes 585
