PREFACE		vii
CHAPTER 1.	PRELIMINARIES	1
	1. Notation and terminology	1
	2. Projective, injective and flat modules	11
	3. Artinian and Noetherian modules	19
	4. Group actions	25
	5. Cohomology groups and group extensions	28
	6. Some properties of cohomology groups	41
	7. Matrix rings and related results	46
CHAPTER 2.	GROUP-GRADED ALGEBRAS AND CROSSED PRODUCTS: GENERAL THEORY	59
	1. Definitions and elementary properties	59
	2. Equivalent crossed products	71
	3. Some ring-theoretic results	78
	4. The centre of crossed products over simple rings	92
	5. Projective crossed representations	103
	6. Graded and G -invariant ideals	119
	7. Induced modules	125
	8. Montgomery's theorem	147
CHAPTER 3.	THE CLASSICAL THEORY OF CROSSED PRODUCTS	151
	1. Central simple algebras	151
	2. The Brauer group	161
	3. Classical crossed products and the Brauer group	169
CHAPTER 4.	CLIFFORD THEORY FOR GRADED ALGEBRAS	181
	1. Graded modules	181
	2. Restriction to A_1	186
	3. Graded homomorphism modules	191
	4. Extension from A_1	196
	5. Induction from A_1	205
CHAPTER 5.	PRIMITIVE AND PRIME IDEALS OF CROSSED PRODUCTS	223
	1. Primitive, prime and semiprime ideals	223
	2. Primitive ideals in crossed products	225
	3. Prime coefficient rings	230
	4. Incomparability and Going Down	246
	5. A Going Up Theorem	259
	6. Chains of prime and primitive ideals	267

CHAPTER 6.	SEMIPRIME AND PRIME CROSSED PRODUCTS	
	1. Coset calculus	277
	2. Δ -methods	285
	3. The main theorem and its applications	294
	4. Sufficient conditions for semiprimeness	305
	5. Twisted group algebras	311
