<b>Foreword</b>	xiii
<b>Introduction: An Overview of Ring Theory</b>	xvii
<b>Table of Principal Notation</b>	xxiii
<b>Chapter 0 General Fundamentals</b>	
0.0 Preliminary Foundations	1
Monoids and Groups	1
Rings and Modules	2
Algebras	5
Preorders and Posets	6
Upper and Lower Bounds	6
Lattices	7
Modular Lattices	8
Zorn's Lemma	10
Well-Ordered Sets and Transfinite Induction	11
Fields	12
First Order Logic	12
0.1 Categories of Rings and Modules	13
Monics and Epics	15
Functors	16
0.2 Finitely Generated Modules, Simple Modules, and Noetherian and Artinian Modules	18
Finitely Generated Modules	18

Cyclic Modules	19
Simple Rings and Modules	19
Chain Conditions	21
Noetherian and Artinian Modules	22
0.3 Abstract Dependence	23
Algebraic and Transcendental Elements	25
Exercises	26
<b>Chapter 1 Construction of Rings</b>	
1.1 Matrix Rings and Idempotents	29
Matrices and Matrix Units	29
Subrings of Matrix Rings	32
Matrices Whose Entries Are Not Necessarily in Rings	33
Idempotents and the Peirce Decomposition	35
Idempotents and Simple Modules	37
Primitive Idempotents	39
Lifting Matrix Units and Idempotents	39
1.2 Polynomial Rings	42
Monoid Rings	42
Polynomial Rings	43
Rings of Formal Power Series and of Laurent Series	48
Digression: More General Constructions	51
A Supplement: Ordered Groups	51
1.3 Free Modules and Rings	53
Free Modules	54
Independent Modules and Direct Sums	54
Modules Over Division Rings Are Free	55
Free Objects	56
Free Rings and Algebras	57
Free Commutative Ring	59
Diagrams	60
Universals	60
Invariant Base Number	61
Weakly Finite Rings	63
A Supplement: The Free Group	64
1.4 Products and Sums	66
Direct Products and Direct Sums	66

Exact Sequences	67
Split Exact Sequences	68
Reduced Products	69
Ultraproducts	71
Products and Coproducts	73
B Supplement: Free Products and Amalgamated Sums	76
C Supplement: Categorical Properties of Modules: Abelian Categories	78
1.5 Endomorphism Rings and the Regular Representation	81
Endomorphism Rings	81
Endomorphisms as Matrices	84
The Dual Base	86
Adjunction of 1	87
1.6 Automorphisms, Derivations, and Skew Polynomial Rings	88
Automorphisms	88
Derivations, Commutators, and Lie Algebras	89
Skew Polynomial Rings and Ore Extensions	92
Principal Left Ideal Domains (PLID's)	93
Skew Polynomial Rings (Without Derivation) Over Fields	96
Differential Polynomial Rings Over Fields	97
The Weyl Algebra	98
Skew Power Series and Skew Laurent Series	100
Skew Group Rings	101
1.7 Tensor Products	101
Tensor Products of Bimodules and of Algebras	103
Properties of the Tensor Operation	105
Tensors and Centralizing Extensions	106
Tensor Products Over Fields	108
Tensor Products and Bimodules	110
1.8 Direct Limits and Inverse Limits	111
Direct Limits	112
D Supplement: Projective Limits	115
The Completion	116
1.9 Graded Rings and Modules	118
Tensor Rings	121
B Supplement: Constructing Free Products	124

1.10	Central Localization (also, cf. §2.12.9ff.)	129
	Structure Passing From $R$ to $S^{-1}R$	132
	Examples of Central Localization	134
	Central Localization of Modules	134
	Exercises	137
<b>Chapter 2 Basic Structure Theory</b>		
2.1	Primitive Rings	150
	Jacobson's Density Theorem	151
	Prime Rings and Minimal Left Ideals	153
	Finite-Ranked Transformations and the Socle	154
	Examples of Primitive Rings	158
	E Supplement: A Right Primitive Ring Which Is Not Primitive	159
2.2	The Chinese Remainder Theorem and Subdirect Products	162
	Subdirect Products	163
	Semiprime Rings	164
2.3	Modules with Composition Series and Artinian Rings	165
	The Jordan-Hölder and Schreier Theorems	165
	Artinian Rings	167
	Split Semisimple Artinian Algebras	171
	Central Simple Algebras and Splitting	173
	Zariski Topology (for Finite Dimensional Algebras)	174
2.4	Completely Reducible Modules and the Socle	176
2.5	The Jacobson Radical	179
	Quasi-Invertibility	180
	Examples	182
	Idempotents and the Jacobson Radical	183
	Weak Nullstellensatz and the Jacobson Radical	184
	The Structure Theoretical Approach to Rings	186
	"Nakayama's Lemma"	188
	The Radical of a Module	189
	F Supplement: Finer Results Concerning the Jacobson Radical	189
	Wedderburn's Principal Theorem	192
	F Supplement: Amitsur's Theorem and Graded Rings	194
	F Supplement: The Jacobson Radical of a Ring	196
	Galois Theory of Rings	198

2.6	Nilradicals	199
	Reduced Rings	201
	Nilpotent Ideals and Nilradicals	202
	The Nilradical of Noetherian Rings	205
	Bounded Index	206
	Derivations and Nilradicals	207
	Nil Subsets	207
	G Supplement: Koethe's Conjecture	209
2.7	Semiprimary Rings and Their Generalizations	211
	Chain Conditions on Principal Left Ideals	212
	Passing from $R$ to $eRe$ and Back	215
	Semiperfect Rings	217
	Structure of Idempotents of Rings	219
	H Supplement: Perfect Rings	221
	G Supplement: Left $\pi$ -Regular Rings	224
2.8	Projective Modules (An Introduction)	225
	Projective Modules	225
	Projective Versus Free	227
	Hereditary Rings	228
	Dual Basis Lemma	229
	Flat Modules	230
	Schanuel's Lemma and Finitely Presented Modules	232
	H Supplement: Projective Covers	233
	Categorical Description of Projective Covers	236
2.9	Indecomposable Modules and LE-Modules	237
	The Krull-Schmidt Decomposition	238
	Uniqueness of the Krull-Schmidt Decomposition	240
	Applications of the Krull-Schmidt Theorem to	
	Semiperfect Rings	242
	Decompositions of Modules Over Noetherian Rings	244
	I Supplement: Levy's Counterexample	245
	C Supplement: Representation Theory	249
	The Brauer-Thrall Conjectures	251
	Quivers and f.r.t.	259
	The Multiplicative Basis Theorem and the	
	Classification Problem	260
	The Categorical Language	261

2.10	Injective Modules	261
	Divisible Modules	263
	Essential Extensions and the Injective Hull	266
	Criteria for Injectivity and Projectivity	268
	J Supplement: Krull-Schmidt Theory for Injective Modules	269
2.11	Exact Functors	270
	Flat Modules and Injectives	273
	Regular Rings	276
	Faithfully Flat Modules	278
2.12	The Prime Spectrum	280
	Localization and the Prime Spectrum	282
	Localizing at Central Prime Ideals	283
	The Rank of a Projective Module	285
	K Supplement: Hilbert's Nullstellensatz and Generic Flatness	286
	Comparing Prime Ideals of Related Rings	291
	LO and the Prime Radical	294
	Height of Prime Ideals	296
2.13	Rings with Involution	296
	The Category of Rings with Involution	299
	Involutions of Rings with Minimal Left Ideals	301
	Simple Rings with Involution	304
	(*)-Radical and (*)-Semiprime	306
	Exercises	308

### Chapter 3 Rings of Fractions and Embedding Theorems

3.1	Classical Rings of Fractions	348
	Properties of Fractions	352
	Localizations of Modules	355
3.2	Goldie's Theorems and Orders in Artinian Quotient Rings	356
	Annihilators	356
	ACC (Ann)	357
	Goldie Rings	358
	Goldie Rank and Uniform Dimension	361

Annihilator Ideals in Semiprime Rings	363
Digression: Orders in Semilocal Rings	367
Embedding of Rings	368
Universal Sentences and Embeddings	368
Embeddings into Primitive and Semiprimitive Rings	369
L Supplement: Embeddings into Matrix Rings	371
L Supplement: Embedding into Division Rings	372
L Supplement: Embedding into Artinian Rings	374
Existentially Closed Rings	377
3.3 Localization of Nonsingular Rings and Their Modules	377
Johnson's Ring of Quotients of a Nonsingular Ring	378
The Injective Hull of a Nonsingular Module	380
Carrying Structure of $R$ to $\hat{R}$	382
3.4 Noncommutative Localization	384
Digression: The Maximal Ring of Quotients	385
The Martindale-Amitsur Ring of Quotients	386
INC Revisited	389
C Supplement: Idempotent Filters and Serre Categories	391
3.5 Left Noetherian Rings	394
Constructing Left Noetherian Rings	395
The Reduced Rank	396
The Principal Ideal Theorem	399
Heights of Prime Ideals	400
Digression: Decomposition Theorems of Noetherian Rings	401
Artinian Properties of Noetherian Rings: Prelude to Jacobson's Conjecture	403
Jacobson's Conjecture	405
D Supplement: Noetherian Completion of a Ring	409
Krull Dimension for Noncommutative Left Noetherian Rings	414
Other Krull Dimensions	418
Critical Submodules	420
M Supplement: Basic Dimension	421
M Supplement: The Noncommutative Forster-Swan Theorem	425
J Supplement: Jategaonkar Theory	433
N Supplement: Gabriel Dimension	441
Exercises	443

**Chapter 4 Categorical Aspects of Module Theory**

4.1	The Morita Theorems	467
	Categorical Notions	469
	Digression: Two Examples	470
	Morita Contexts and Morita's Theorems	471
	Proof of Morita's Theorem and Applications	475
	Digression: Simple Noetherian Rings	476
4.2	Adjoints	477
	Adjoint Pairs and Universals	479
	Exercises	481
	Appendix A. The Proof of Magnus' Theorem and the Magnus-Witt Theorem (Theorem 1.3.38)	485
	Exercise	490
	Appendix B. Normed Algebras and Banach Algebras	490
	Exercises	493
	<b>The Basic Ring-Theoretic Notions and Their Characterizations</b>	495
	<b>Major Ring- and Module-Theoretic Results Proved in Volume I (Theorems and Counterexamples; also cf. "Characterizations")</b>	499
	<b>References</b>	507
	Bibliography of Books	507
	Collections of Papers	510
	Bibliography of Articles	512
	<b>Subject Index</b>	531
