Introduction	ix
Conventions and Notations	xi
1 Background material from rings and modules	1
1.1 The Jordan–Hölder theorem	1
1.2 The Jacobson radical	3
1.3 The Wedderburn structure theorem	5
1.4 The Krull–Schmidt theorem	6
1.5 Projective and injective modules	8
1.6 Frobenius and symmetric algebras	10
1.7 Idempotents and the Cartan matrix	11
1.8 Blocks and central idempotents	14
1.9 Algebras over a complete domain	15
2 Homological algebra	19
2.1 Categories and functors	19
2.2 Morita theory	22
2.3 Chain complexes and homology	25
2.4 Ext and Tor	28
2.5 Long exact sequences	31
2.6 Extensions	35
2.7 Operations on chain complexes	38
2.8 Induction and restriction	42
3 Modules for group algebras	45
3.1 Operations on RG -modules	45
3.2 Cup products	51
3.3 Induction and restriction	55
3.4 Standard resolutions	58
3.5 Cyclic and abelian groups	60
3.6 Relative projectivity and transfer	62
3.7 Low degree cohomology	69
3.8 Stable elements	73
3.9 Relative cohomology	75
3.10 Vertices and sources	77
3.11 Trivial source modules	77
3.12 Green correspondence	78

3.13	Clifford theory	81
3.14	Modules for p -groups	85
3.15	Tensor induction	89
4	Methods from the representations of algebras	93
4.1	Representations of quivers	93
4.2	Finite dimensional hereditary algebras	99
4.3	Representations of the Klein four group	100
4.4	Representation type of algebras	106
4.5	Dynkin and Euclidean Diagrams	108
4.6	Weyl groups and Coxeter transformations	112
4.7	Path algebras of finite type	115
4.8	Functor categories	118
4.9	The Auslander algebra	121
4.10	Functorial filtrations	123
4.11	Representations of dihedral groups	126
4.12	Almost split sequences	132
4.13	Irreducible maps and the Auslander–Reiten quiver	139
4.14	Rojter's theorem	142
4.15	The Riedtmann structure theorem	143
4.16	Tubes	146
4.17	Webb's Theorem	147
4.18	Brauer graph algebras	152
5	Representation rings and Burnside rings	159
5.1	Representation rings and Grothendieck rings	160
5.2	Ordinary character theory	161
5.3	Brauer character theory	163
5.4	G -sets and the Burnside ring	165
5.5	The trivial source ring	171
5.6	Induction theorems	172
5.7	Relatively projective and relatively split ideals	177
5.8	A quotient without nilpotent elements	178
5.9	Psi operations	180
5.10	Bilinear forms on representation rings	183
5.11	Non-singularity	185
6	Block theory	189
6.1	Blocks and defect groups	189
6.2	The Brauer map	191
6.3	Brauer's second main theorem	194
6.4	Clifford theory of blocks	196
6.5	Blocks of cyclic defect	199
6.6	Klein four defect groups	204
	Bibliography	211
	Index	221
