

1.	GENERAL THEORY OF LIE ALGEBRAS	1
1.1	Basic Ideas and Definitions	2
1.2	Representations of Lie Algebras	7
1.3	Nilpotent Lie Algebras	13
1.4	Solvable Lie Algebras	21
1.5	Killing Forms and Non-degenerate Lie Algebras	29
1.6	Extensions of Coefficient Fields	37
1.7	Lie Algebras of Dimension ≤ 3	41
1.8	Cartan Subalgebras and Root Space Decompositions	48
1.9	The Universal Enveloping Algebra	52
1.10	Existence of Faithful Representations	60
2.	SEMISIMPLE LIE ALGEBRAS	71
2.1	Semisimple Lie Algebras	72
2.2	Root Space Decomposition	82
2.3	α -sequence of Weights	88
2.4	Fundamental System of Roots and π -system	94
2.5	Classification of π -systems	103
2.6	Classification of Simple Lie Algebras	112
2.7	Classical Simple Lie Algebras	121
3.	COHOMOLOGY OF LIE ALGEBRAS AND ITS APPLICATION	135
3.1	Cohomology of Lie Algebras	136
3.2	Applications of Cohomology Theory	140
3.3	The Casimir Endomorphism	147
3.4	Cohomology of a Non-trivial Irreducible Representation	150
3.5	Levi Decompositions	155

4.	SEMISIMPLE LIE ALGEBRAS OVER \mathbb{R} AND \mathbb{C}	161
4.1	Lie Algebras over \mathbb{R} and \mathbb{C}	162
4.2	Simple Lie Algebras	165
4.3	Compact Lie Algebras	168
4.4	Automorphism Groups of Lie Algebras	173
4.5	Cartan Decompositions: Real Forms of Semisimple Lie Algebras Over \mathbb{C}	179
4.6	Conjugacy of Cartan Subalgebras	187
4.7	Iwasawa Decompositions	190
5.	GROUPS CONNECTED WITH A ROOT SYSTEM	197
5.1	Introduction and Notation	198
5.2	Weyl Groups	202
5.3	Automorphism Group of a Semisimple Lie Algebra over \mathbb{C}	207
5.4	Automorphism Group of a Compact Semisimple Lie Algebra	215
5.5	The Inversion * and the Universal Center $C(\Delta)$	219
5.6	Affine Group $Af(\Delta)$ and Affine Weyl Group $Afd(\Delta)$	227
5.7	The Group $F(\pi)$ and the Extended Dynkin Diagram	234
5.8	Proof of $F(\pi) \cap Afd(\Delta) = 1$	238
5.9	Computation of the Universal Center	243
6.	LINEAR GROUPS	249
6.1	Linear Groups and their Lie Algebras	251
6.2	Classical Linear Groups and Algebraic Groups	259
6.3	Polar Decomposition of $GL(r, \mathbb{C})$	265
6.4	Cartan Decompositions of Semisimple Linear Groups	272
6.5	Multiplication Table of a Lie Algebra	280
6.6	Iwasawa Decompositions of Semisimple Linear Groups	287
6.7	Construction of a Linear Group Corresponding to a Lie Algebra	294
6.8	Flag Manifolds	300
6.9	Weyl's Theorems on Compact Lie Groups	308
7.	IRREDUCIBLE REPRESENTATIONS	317
7.1	Introduction	318
	A. Complex Irreducible Representations	320
7.2	Highest Weights	322
7.3	Tensor Product Representations	326
7.4	The Module of All Weights and the Universal Center	334
7.5	Existence of Irreducible Representations: The Character Formula and the Dimension Formula	345
7.6	Fundamental Representations of the Classical Simple Lie Algebras	358

	B. Real Irreducible Representations	363
7.7	The Basic Concepts	363
7.8	Cartan's Theorem	366
7.9	The Index of a Complex Representation	374
7.10	Complex Representations of Real, Semisimple Lie Algebras	379
8.	CLASSIFICATION OF REAL SIMPLE LIE ALGEBRAS	389
8.1	Notation	390
8.2	Subalgebras of Maximal Rank in a Compact Lie Algebra	393
8.3	Explicit Determination of Maximal Subalgebras of Maximal Rank in a Compact Simple Lie Algebra	400
8.4	Table of Maximal Subalgebras of Maximal Rank in Compact Simple Lie Algebras	411
8.5	Classification of Real Simple Lie Algebras of Inner Type	415
8.6	Real Forms of Outer Type	420
8.7	The Automorphism of π Given by a Conjugation	434
8.8	The Representation $\text{ad}(k) _{\mathfrak{p}}$	437
	Appendix: NOTES ON LINEAR OPERATORS	447
	Bibliography	473
	Index	477
