TABLE OF CONTENTS

Introduction 1

Chapter 0 Preparatory remarks 5

§1 Conventions 5

§2 Some general remarks on graded algebraic structures 6

Chapter I Formal constructions 12

§1 Definition and elementary properties of Lie superalgebras 12

§2 The enveloping algebra of a Lie superalgebra 19
1. Definition and some basic properties of the enveloping algebra 19
2. The supersymmetric algebra of a graded vector space 23
3. Filtration of the enveloping algebra and the Poincaré, Birkhoff, Witt theorem 25
4. The enveloping algebra as a Hopf superalgebra 31

§3 Representations of Lie superalgebras 34
1. The connection between representations of L and U(L) 34
2. Canonical constructions with $\hat{L}$ - modules 37
A. Extension of the base field 37
B. The tensor product of graded L - modules 38
C. Representations in spaces of multilinear mappings 41
3. Invariants 45

§4 Induced and produced representations 51
1. Induced representations 52
2. Produced representations 54
3. Additional structures on produced modules : Filtration and multiplication 56
4. Some non-canonical constructions 60
5. The Guillemin, Sternberg realization theorem 62

Chapter II Simple Lie superalgebras 72

§1 Miscellanies on Z - graded and filtered Lie superalgebras 72
1. Some definitions concerning Z - graded Lie superalgebras and

a criterion for two bitransitive Lie superalgebras to be isomorphic 72
2. Various results on transitive Lie superalgebras 77
3. Construction of two types of transitive Lie superalgebras 83
4. Filtration of Lie superalgebras 86

§2 Some general properties of simple Lie superalgebras 91
1. Some elementary results on simple Lie superalgebras 91
2. Discussion of the $L_{\bar{0}}$ - module $L_{\bar{1}}$ 96
3. Cartan subalgebras of a Lie superalgebra 108

§3 Lie superalgebras whose Killing form is non-degenerate 112
1. Some basic general results 112
2. The root space decomposition of a Lie superalgebra whose Killing form is non-degenerate 120

§4 The classical simple Lie superalgebras 124
1. The general linear Lie superalgebra pl(V) 124
2. The special linear Lie superalgebra spl(V) 127
3. Subalgebras of pl(V) which leave invariant a homogeneous non-degenerate bilinear form on V 129
A. The orthosymplectic Lie superalgebras 129
B. The Lie superalgebras b(n) 132
4. The (f,d) algebras of Gell-Mann, Michel, Radicati 133
5. Comments on the exceptional classical simple Lie superalgebras 134
6. The root space decomposition of the classical simple Lie superalgebras 136

§5 Classification of the classical simple Lie superalgebras 140
1. A trivial preliminary remark 142
2. $L_{\bar{0}}$ is not simple, ad' is irreducible 143
3. $L_{\bar{0}}$ is not simple, ad' is not irreducible 148
4. $L_{\bar{0}}$ is simple 160
5. Extension of some classical simple Z-graded Lie superalgebras 163

§6 The Cartan Lie superalgebras 169

1. The Lie superalgebra W(V) of superderivations of an exterior algebra 169
A. Definition and elementary properties of W(V) 169
B. W(V) as a sl(V) - module 173
C. W(V) as a universal transitive Z - graded Lie superalgebra 177
D. W(V) as a universal transitive filtered Lie superalgebra 181
2. The Lie superalgebras S(V) and $\tilde{S}(V,t)$ 186
A. Elementary properties of S(V) 186
B. Elementary properties of $\tilde{S}(V,t)$, dim V even 189
C. Filtered Lie superalgebras whose associated Z - graded Lie superalgebra is isomorphic to S(n) 191
3. The Lie superalgebras $\tilde{H}(\psi)$ and $H(\psi)$ 194
A. Elementary properties of $\tilde{H}(\psi)$ and $H(\psi)$ 194
B. A characterization of the algebras $\tilde{H}(\psi)$ and $H(\psi)$ 197
C. Filtered Lie superalgebras whose associated Z - graded Lie superalgebra is isomorphic to $\tilde{H}(\psi)$ or $H(\psi)$ 202

§7 Classification of a special type of transitive Z - graded Lie superalgebras 208

§8 The main classification theorems 222

Chapter III A survey of some further developments 231

§1 Superderivations of Clifford algebras and Lie superalgebras 231
1. Superderivations of a Clifford algebra 231
2. Superderivations of a Lie superalgebra 232

§2 A few remarks on nilpotent, solvable, and semi-simple Lie superalgebras 236
1. Nilpotent and solvable Lie superalgebras 236
2. Semi-simple Lie superalgebras 237

§3 Finite-dimensional representations of simple Lie superalgebras 239
1. Lie superalgebras all of whose finite-dimensional representations are completely reducible 239
2. Irreducible representations of simple Lie superalgebras 241
3. Generalized adjoint operations and star representations 243

Appendix 248

1. Notational conventions for reductive Lie algebras 248
2. Remarks on semi-simple Lie algebras and their representations 250
3. Special remarks on simple Lie algebras 252
4. A technical lemma 254
5. The index of a representation 258
