CONTENTS

0. INTRODUCTION 1

1. ALGEBRAS IN GENETICS 5
   A. The occurence of algebras in genetics 5
   B. Algebras with genetic realization and baric algebras 12

2. ALGEBRAIC PRELIMINARIES 17
   A. Non associative algebras - definitions and notations 18
   B. Polynomials in non-associative powers 25
   C. The rank equation of an algebra 32

3. TRAIN ALGEBRAS, GENETIC ALGEBRAS AND SPECIAL TRAIN ALGEBRAS 34
   A. Train algebras 34
   B. Genetic algebras 39
   C. Special train algebras 55

4. IDEMPOTENTS AND SEQUENCES OF POWERS IN TRAIN ALGEBRAS, GENETIC ALGEBRAS AND ALGEBRAS WITH GENETIC REALIZATION 65
   A. Idempotents in train algebras and genetic algebras 65
   B. Idempotents in algebras with genetic realization 71
   C. Sequences of principal and plenary powers in genetic algebras 78

5. THE NON COMMUTATIVE CASE 85
   A. Train algebras, genetic algebras and special train algebras 85
   B. Idempotents and sequences of powers 98

6. CONSTRUCTION OF NEW ALGEBRAS 103
A. Linear combinations of algebras 103
B. Tensor products 108
C. Duplication 113
D. Construction of new algebras by linear mappings 128

7. APPLICATIONS I 131
A. Additive segregation rates 135
B. Partially coupled loci 141
C. Autopolyploidy 155
D. Overlapping and continuously overlapping generations 166

8. APPLICATIONS II 176
A. Asymmetric segregation rates 176
B. Sex-linked inheritance 180
C. Inbreeding systems 197

9. CONCLUDING REMARKS AND BERNSTEIN ALGEBRAS 203
A. Open problems 203
B. Bernstein algebras 203
