

C O N T E N T S

Einleitung	I
Introduction	IV

I. Algebraic and number-theoretic concepts

§ 1	Modules	1
§ 2	Important properties of rings	4
§ 3	Near-rings	9
§ 4	R-algebras and near-algebras	12
§ 5	Subgroups of $Z_n \times Z_n$, n squarefree	13
§ 6	Ω -groups and universal algebras	17
§ 7	Number-theoretic results	20

II. Concepts of automata theory

§ 8	Basic definitions	22
§ 9	Properties of general automata	24
§ 10	Properties of linear automata	26

III. Connections between algebra and automata theory

§ 11	Some preliminary definitions	32
§ 12	The determination of $N(A)$	34
§ 13	The matrix representation of $N(A)$	37
§ 14	The radical $J(N(A))$, if $N_0(A)$ is isomorphic to $(Z, +, \cdot)$ or $(Z_n, +, \cdot)$	46
§ 15	A motivation for § 16	49
§ 16	Ideals in syntactic rings	52
§ 17	Algorithms for § 16	63
§ 18	Properties of the ideals in § 16	66
§ 19	$N_0(A)$ and reachability in machines	73
§ 20	Ideals in $N_0(A)$ and reachability in machines I	80
§ 21	Ideals in $N_0(A)$ and reachability in machines II	84
