Preface	xi
Introduction	1
Chapter 1. Definition of Vertex Algebras	11
1.1. Formal distributions	11
1.2. Locality	16
1.3. Definition of a vertex algebra	20
1.4. First example: commutative vertex algebras	22
1.5. Bibliographical notes	23
Chapter 2. Vertex Algebras Associated to Lie Algebras	25
2.1. Heisenberg Lie algebra	25
2.2. The vertex algebra structure on $\pi$	28
2.3. Checking vertex algebra axioms	32
2.4. Affine Kac–Moody algebras and their vertex algebras	38
2.5. The Virasoro vertex algebra	41
2.6. Bibliographical notes	46
Chapter 3. Associativity and Operator Product Expansion	47
3.1. Uniqueness theorem	47
3.2. Associativity	48
3.3. Operator product expansion	51
3.4. Examples and applications of OPE	56
3.5. A Lie algebra attached to a vertex algebra	60
3.6. Strong Reconstruction Theorem	63
3.7. Correlation functions	65
3.8. Bibliographical notes	67
Chapter 4. Rational Vertex Algebras	69
4.1. Modules over vertex algebras	69
4.2. Vertex algebras associated to one-dimensional integral lattices	72
4.3. Boson–fermion correspondence	77
4.4. Lattice vertex algebras	80
4.5. Introducing rational vertex algebras	82
4.6. Constructing new vertex algebras	83
4.7. Bibliographical notes	86
Chapter 5. Vertex Algebra Bundles	87
5.1. The group $\text{Aut } \mathcal{O}$	87
5.2. Exponentiating vector fields	89

5.3. Primary fields	92
5.4. The main construction	96
5.5. A flat connection on the vertex algebra bundle	102
5.6. Bibliographical notes	103
Chapter 6. Action of Internal Symmetries	105
6.1. Affine algebras, revisited	105
6.2. The general twisting property	107
6.3. Description of the $n$ -point functions and modules	112
6.4. Bibliographical notes	114
Chapter 7. Vertex Algebra Bundles: Examples	115
7.1. The Heisenberg algebra and affine connections	115
7.2. The Virasoro algebra and projective connections	119
7.3. Pseudodifferential operators and kernels	123
7.4. The gauge action on the Heisenberg bundle	128
7.5. The affine Kac–Moody vertex algebras and connections	130
7.6. Bibliographical notes	131
Chapter 8. Conformal Blocks I	133
8.1. Defining conformal blocks for the Heisenberg algebra	133
8.2. Definition of conformal blocks for general vertex algebras	136
8.3. Comparison of the two definitions of conformal blocks	140
8.4. Coinvariants for commutative vertex algebras	143
8.5. Twisted version of conformal blocks	145
8.6. Appendix. Proof of Proposition 8.3.2	146
8.7. Bibliographical notes	148
Chapter 9. Conformal Blocks II	149
9.1. Multiple points	149
9.2. Functoriality of conformal blocks	151
9.3. Chiral correlation functions	153
9.4. Conformal blocks in genus zero	158
9.5. Functional realization of Heisenberg conformal blocks	164
9.6. Bibliographical notes	168
Chapter 10. Free Field Realization I	169
10.1. The idea	169
10.2. Finite-dimensional setting	171
10.3. Infinite-dimensional setting	177
10.4. Bibliographical notes	184
Chapter 11. Free Field Realization II	185
11.1. Weyl algebras in the infinite-dimensional case	185
11.2. Local completion	190
11.3. Wakimoto realization	196
11.4. Bibliographical notes	201
Chapter 12. The Knizhnik Zamolodchikov Equations	203
12.1. Conformal blocks in the Heisenberg case	203
12.2. Moving the points	207

12.3.	Conformal blocks for affine Kac-Moody algebras	211
12.4.	Bibliographical notes	214
Chapter 13.	Solving the KZ Equations	215
13.1.	Conformal blocks from the point of view of free field realization	215
13.2.	Generalization: singular vectors	219
13.3.	Finding solutions	222
13.4.	Bibliographical notes	226
Chapter 14.	Quantum Drinfeld–Sokolov Reduction and $W$ algebras	227
14.1.	The BRST complex	227
14.2.	Proof of the main theorem	231
14.3.	Examples	234
14.4.	The second computation	237
14.5.	Bibliographic notes	246
Chapter 15.	Vertex Lie Algebras and Classical Limits	247
15.1.	Vertex Lie algebras	247
15.2.	Vertex Poisson algebras	252
15.3.	Kac–Moody and Virasoro limits	254
15.4.	Poisson structure on connections	256
15.5.	The Virasoro Poisson structure	260
15.6.	Opers	261
15.7.	Classical Drinfeld–Sokolov reduction	265
15.8.	Comparison of the classical and quantum Drinfeld–Sokolov reductions	268
15.9.	Bibliographical notes	270
Chapter 16.	Vertex Algebras and Moduli Spaces I	271
16.1.	The flat connection on the vertex algebra bundle, revisited	272
16.2.	Harish–Chandra pairs	275
16.3.	Moduli of curves	280
16.4.	Bibliographical notes	288
Chapter 17.	Vertex Algebras and Moduli Spaces II	291
17.1.	Moduli of bundles	291
17.2.	Local structure of moduli spaces	297
17.3.	Global structure of moduli spaces	298
17.4.	Localization for affine algebras at the critical level	299
17.5.	Chiral de Rham complex	304
17.6.	Bibliographical notes	307
Chapter 18.	Chiral Algebras	309
18.1.	Some sheaf theory	309
18.2.	Sheaf interpretation of OPE	313
18.3.	Chiral algebras	316
18.4.	Lie* algebras	320
18.5.	Factorization	323
18.6.	Global Kac–Moody and Virasoro algebras	324
18.7.	Bibliographical notes	328

Appendix	329
A.1. Discs, formal discs and ind-schemes	329
A.2. Connections	331
A.3. Lie algebroids and $\mathcal{D}$ -modules	332
A.4. Lie algebra cohomology	334
Bibliography	335
Index	343
List of Frequently Used Notation	345
